 - Local government area
 - Private lands
- Microbat cave survey effort**
 - ◆ Microchiropteran bat (Harp trap)
 - ◆ Microchiropteran bat (Roost)
 - ◆ Microchiropteran bat (Ultrasonic)
 - Habitat assessment walking track
 - Recorded breeding habitat for Large-eared Pied Bat
- Initial habitat suitability assessment**
 - Recorded diurnal roosting (evident observed)
 - Highly suitable for diurnal roosting (no evidence found)
 - Not suitable for diurnal roosting (no trapping survey required)

Site 1. Various roosting opportunities recorded, including signs of diurnal roosting.

Site 2. Small straight cliff edge with isolated small pockets not considered potential for diurnal roosting along escarpment.

Site 3. Some shallow overhangs in escarpment however considered unsuitable for diurnal roosting.

Site 4. Shallow overhang present but no signs of use and no potential for diurnal roosting.

Site 6. Several shallow overhangs present, one with diurnal roosting suitability and small signs of use, but not considered likely to be used for breeding.

Site 5. Complete escarpment could be viewed by binoculars from side vantage point. Considered unsuitable for diurnal roosting due to absence of caves or overhangs.

Site 7. Private lands, no current

Site 8. Various roosting opportunities recorded, including signs of diurnal roosting. Potential and expected breeding.

Note: this map only shows the mountainous portion of the overall study area.

Figure 14.7d
Microbat Cave Breeding -
Habitat Assessment and Survey
Central (Page 2 of 3)

Site 9. Very viny and scrub covered rock surface. No good overhangs suitable for diurnal roosting, all shallow and easily predated.

Site 10. Large caves present - suitable for diurnal roosting.

Site 11. Densely vegetated escarpment, overhangs present and small amount of guano observed, but all overhangs are open and considered unsuitable for diurnal roosting. Therefore no likely breeding within 100m of the current Tower 39 location.

Site 12. One cave located with evidence of diurnal roosting, but considered highly unlikely breeding. Remaining caves likely feeding spots as very open and well lit.

Legend

- Biodiversity study area
- Existing environment
 - Road
 - Named watercourse
 - Waterbody
 - Slope $\geq 50^\circ$ (sourced from DCS Spatial Services)
 - NPWS reserve
 - State conservation area
 - Flora reserve
 - State forest
 - Local government area
 - Private lands
- Microbat cave survey effort
 - ◆ Microchiropteran bat (Harp trap)
 - ◆ Microchiropteran bat (Roost)
 - ◆ Microchiropteran bat (Ultrasonic)
 - Habitat assessment walking track
 - Recorded breeding habitat for Large-eared Pied Bat
- Initial habitat suitability assessment
 - Recorded diurnal roosting (evident observed)
 - Highly suitable for diurnal roosting (no evidence found)
 - Not suitable for diurnal roosting (no trapping survey required)

Note: this map only shows the mountainous portion of the overall study area.
