BASIS OF REPORT

This report has been prepared by SLR Consulting Australia Pty Ltd (SLR) with all reasonable skill, care and diligence, and taking account of the timescale and resources allocated to it by agreement with CPBDJV and TfNSW (the Client). Information reported herein is based on the interpretation of data collected, which has been accepted in good faith as being accurate and valid.

This report is for the exclusive use of the Client. No warranties or guarantees are expressed or should be inferred by any third parties. This report may not be relied upon by other parties without written consent from SLR.

SLR disclaims any responsibility to the Client and others in respect of any matters outside the agreed scope of the work.

APPENDICES

Appendix A Acoustic Terminology
Appendix B Operational Road Traffic Information

1 Introduction

SLR Consulting Australia Pty Ltd (SLR) has been engaged by CPB Downer JV, on behalf of Transport for NSW, to undertake an Operational Noise Review (ONR) for the Warringah Freeway Upgrade (WFU) project (the project).

Approval for State Significant Infrastructure SSI-8863 (the Western Harbour Tunnel and Warringah Freeway Upgrade project) was obtained from The Mister for Planning and Public Spaces on 21 January 2021.

This ONR has been completed to meet the requirements of the project's Minister's Conditions of Approval that are related to noise.

The potential operational noise impacts from the project were previously assessed for the concept design in:

- Western Harbour Tunnel and Warringah Freeway Upgrade Environmental Impact Statement – Volumes 1A-B and 2A-J (dated January 2020) (the EIS), including Appendix G – Noise and Vibration, Technical Working Paper
- Western Harbour Tunnel and Warringah Freeway Upgrade Response to Submissions Report (dated September 2020) (the RtS).

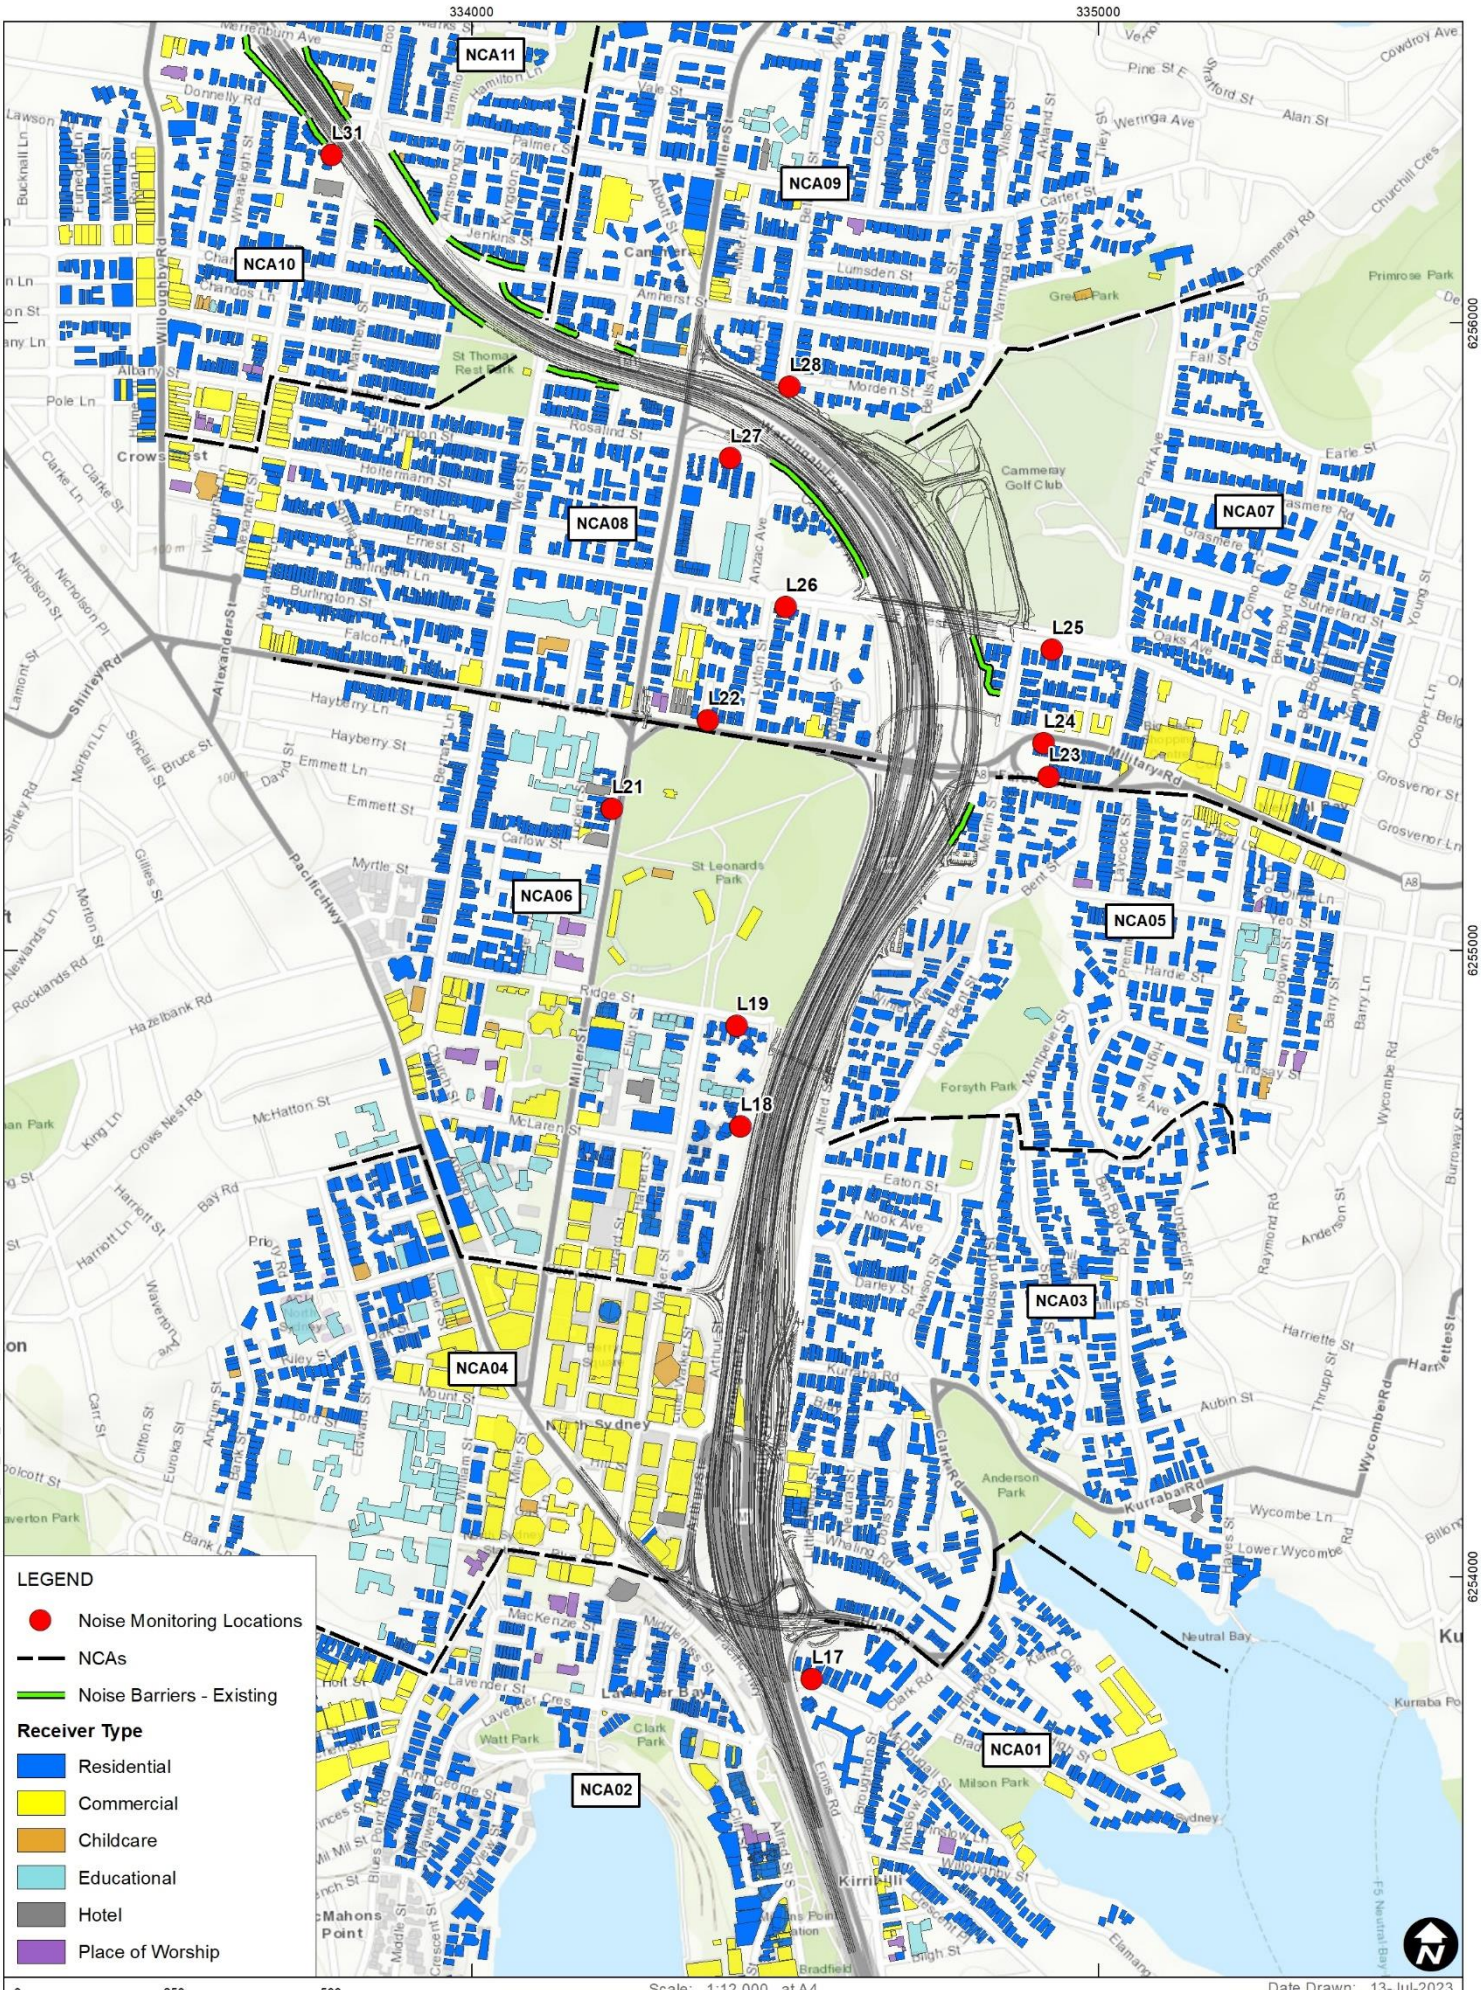

1.1 Project Overview

Key features of the WFU include:

- Upgrade and reconfiguration of the Warringah Freeway from immediately north of the Sydney Harbour Bridge through to Willoughby Road at Naremburn
- Upgrades to interchanges at Falcon Street in Cammeray and High Street in North Sydney
- New and upgraded pedestrian and cyclist infrastructure
- New, modified and relocated road and shared user bridges across the Warringah Freeway
- Connection of the Warringah Freeway to the mainline tunnels portals for the Western Harbour Tunnel and the Beaches Link tunnels via on and off ramps
- Upgrades to existing roads around the Warringah Freeway to integrate the project with the surrounding road network
- Upgrades and modifications to bus infrastructure, including relocation of the existing bus layover along the Warringah Freeway
- Other operational infrastructure, including surface drainage and utility infrastructure, signage, tolling, lighting, CCTV and other traffic management systems.

The surface connections to Western Harbour Tunnel at Berry Street and Falcon Street have also been included in the assessment.

An overview of the project and surrounding area is shown in **Figure 1**.

SITE PLAN

FIGURE 1

1.2 Purpose of Report

The purpose of this ONR is to confirm the operational road noise emissions from the final design of the project and to determine the requirement for feasible and reasonable noise control measures. The ONR includes:

- Confirmation of the noise goals for the surrounding noise sensitive receivers
- Description of the assessment methodology, including inputs to and validation of the noise model
- Confirmation of the operational noise predictions and impacts from the final design of the project
- Review of the feasible and reasonable noise mitigation measures identified in the EIS, along with identification of any additional noise mitigation measures, where relevant (including consideration of properties identified as eligible for consideration of at-property treatment due to Western Harbour Tunnel)
- Procedures for the management of any potential future operational noise complaints
- Details of how the noise related Minister's Conditions of Approval have been met by this ONR.

The ONR does not include an assessment of the Stage 3 Western Harbour Tunnel operational noise impacts and associated control measures. These impacts will be assessed under a separate ONR in accordance with the project's Staging Report.

1.3 Minister's Conditions of Approval

The Minister's Conditions of Approval for the project were issued on 21 January 2021. The requirements specific to noise, and where these requirements are assessed in this ONR, are outlined in **Table 1**.

Table 1 Minister's Conditions of Approval

No.	Details	Where Addressed in this ONR
Noise Insulation Program		
A9	The implementation of the Noise Insulation Program (NIP) does not trigger the following Conditions A24, A30, B1 and B11, until such time that construction commences.	The TfNSW NIP is discussed in **Section 5.2.3.1**
Land Use Survey		
E65	A detailed land use survey must be undertaken to confirm sensitive land user(s) (including critical working areas such as operating theatres and precision laboratories) potentially exposed to construction noise and vibration, construction ground-borne noise and operational noise. The survey may be undertaken on a progressive basis but must be undertaken in any one area before the commencement of work which generates construction or operational noise, vibration or ground-borne noise in that area.	**Section 4.2** and **Table 5**
Warringah Freeway Upgrade – Noise Mitigation Measures		
E84	The Proponent must implement the Noise Insulation Program (NIP) developed for the Warringah Freeway Upgrade works. Should the NIP be progressively updated, the updated version must be provided to the Planning Secretary for information. *Note: the implementation of temporary or permanent noise mitigation measures in accordance with NIP is considered as low impact work as defined in the definitions table Low Impact Work (d).*	The TfNSW NIP is discussed in **Section 5.2.3.1**

No.	Details	Where Addressed in this ONR
E85	Landowners whose residential properties are eligible to receive at-property treatment in accordance with the NIP must be advised of the range of options that can be installed at or in their property and given a choice as to which of these they agree to have installed. A copy of all guidelines and procedures that will be used to determine at-property treatment at their residence must be provided to the landowner.	
E86	The offer for at-property treatment or the application of other noise and vibration mitigation measures does not expire until the out-of-hours work affecting that property are completed, even if the landowner initially refuses the offer.	
E87	The implementation of at-property treatment does not preclude the application of other noise and vibration mitigation and management measures including temporary and long term accommodation.	
Operational Noise Mitigation Measures		
E89	The Proponent must prepare an Operational Noise Review (ONR) to confirm noise control measures that would be implemented for the operation of the CSSI. The ONR must be prepared in consultation with the Planning Secretary, relevant council(s), and the EPA and must: (a) confirm the appropriate operational noise objectives and levels for surrounding development, including existing sensitive land user(s); (b) confirm the operational noise predictions based on the final design. Confirmation must be based on an appropriately calibrated noise model (which has incorporated noise monitoring, and concurrent traffic counting, where necessary for calibration purposes). The assessment must specifically include verification of noise levels at all fixed facilities, based on noise monitoring undertaken at appropriately identified noise catchment areas surrounding the facilities; (c) confirm the operational noise impacts at adjoining development based on the final design of the CSSI, including operational daytime LAeq,15 hour and night-time LAeq, 9-hour traffic noise contours; (d) review the suitability of the operational noise mitigation measures identified in the documents listed in Condition A1 and, where necessary, investigate and identify additional noise and vibration mitigation measures required to achieve the noise criteria outlined in the *NSW Road Noise Policy* (DECCW, 2011) and *NSW Noise Policy for Industry* (EPA, 2017) as relevant, including the timing of implementation; (e) include a consultation strategy to seek feedback from directly affected landowners on the noise and vibration mitigation measures; and (f) procedures for the management of operational noise and vibration complaints. The ONR must be verified by an independent acoustic expert. The ONR must be undertaken at the Proponent's expense and submitted to the Planning Secretary within 12 months of the commencement of construction unless otherwise agreed by the Planning Secretary. The Proponent must implement the identified noise and vibration control measures and make the ONR publicly available. *Note: The design of noise barriers and the like must be undertaken in consultation with the community as part of the Place Design and Landscape Plan required under Condition E177.*	This report **Section 8.2** **Section 3**, **Appendix B** **Section 4, 4.3** and **6**, **Appendix B** **Section 6, Appendix B** **Section 5, 7** and **8.1** **Section 8.2** **Section 8.3** **Section 8.4** **Section 7**
E90	Operational noise mitigation measures as identified in **Condition E89** that will not be physically affected by work, must be implemented within six months of submitting the **ONR**, unless otherwise agreed by the Planning Secretary. Where implementation of operational noise mitigation measures are not proposed to be implemented in accordance with this requirement, the Proponent must submit to the Planning Secretary a report providing justification as to why, along with details of temporary measures that would be implemented to reduce construction noise impacts, until such time that the operational noise mitigation measures are implemented. The report must be endorsed by the AA and submitted to the Planning Secretary within six months of submitting the ONR. *Note: Not having finalised detailed design is not sufficient justification for not implementing the proposed mitigation measures*.	**Section 7.4**

No.	Details	Where Addressed in this ONR
E91	In the absence of an ONR required under Condition E89, the following can be undertaken: (a) provision of at-property noise mitigation measures required in the NIP under Condition E84; and (b) construction of the Massey to Amherst Street, Cammeray noise barrier / wall as identified in Appendix C. *Note: Notwithstanding the provision of this condition, should the ONR identify the need for further mitigation the Proponent may be required to amend the design of already installed noise mitigation measures.*	The TfNSW NIP is discussed in **Section 5.2.3.1** The Amherst Street noise wall was constructed as part of WFU Early Works.
Operational Noise Validation		
E92	Within 12 months of the commencement of operation of the CSSI, the Proponent must undertake monitoring of operational noise to compare actual noise performance of the CSSI against the noise performance predicted in the review of noise mitigation measures required by Condition E89.	ONCR discussed in **Section 8.5**
Operational Noise Compliance Report		
E93	An Operational Noise Compliance Report (ONCR) must be prepared to document the findings of the operational noise monitoring carried out under Condition E92. The ONCR must be prepared in accordance with the Model Validation Guideline (RMS, 16 May 2018 Version 1.1) and must address the following: (a) compliance with the operational noise levels predicted in the review of operational noise mitigation measures required under Condition E89; (b) compliance with the operational noise levels in terms of criteria and noise goals established in the NSW Road Noise Policy (DECCW, 2011) and NSW Noise Policy for Industry (EPA, 2017); (c) methodology, location and frequency of noise monitoring undertaken, including monitoring sites at which CSSI noise levels are ascertained, with specific reference to locations indicative of impacts on receivers; (d) pavement corrections for light and heavy vehicles and an assessment of the acoustic performance of different pavement types over their design life; (e) details of any complaints and enquiries received in relation to operational noise generated by the CSSI between the date of commencement of operation and the date the report was prepared; (f) any required recalibrations of the noise model taking into consideration factors such as noise monitoring and actual traffic numbers and proportions; (g) an assessment of the performance and effectiveness of applied noise mitigation measures together with a review and if necessary, reassessment of mitigation measures; and (h) identification of additional measures to those identified in the review of noise mitigation measures required by Condition E89, that are to be implemented with the objective of meeting the criteria outlined in the NSW Road Noise Policy (DECCW, 2011) and NSW Noise Policy for Industry (EPA, 2017), when these measures are to be implemented and how their effectiveness is to be measured and reported to the Planning Secretary and the EPA. The Operational Noise Compliance Report must be submitted to the Planning Secretary and the EPA within 60 days of completing the operational noise monitoring and made publicly available.	ONCR discussed in **Section 8.5**
Maintenance of Low Noise Road Pavements		
E94	Low noise road pavements must be maintained to ensure that they continue to contribute to the compliance of mitigated noise levels identified in the ONR (Condition E89) throughout the life of the project.	ONCR discussed in **Section 8.5**
Operational Noise Barriers Design		
E182	Operational noise barriers must be designed to minimise visual and amenity impacts and be designed in accordance with the *Noise wall design guideline – Design guideline to improve the appearance of noise walls in NSW* (RMS, March 2016).	**Section 5.2.2** and **7.2**

Note: The above conditions make various references to operational vibration. As noted in the EIS, vibration impacts from traffic on surface roads and tunnels are considered negligible and have not been assessed further.

2 Existing Environment

2.1 Sensitive Receivers

Receivers potentially sensitive to noise and vibration have been categorised as residential dwellings, commercial/industrial buildings, or 'other sensitive' land uses which can include educational facilities, hospital wards, places of worship, and child care centres. Receiver types and locations are shown in **Figure 1**.

2.2 Existing Noise Surveys and Monitoring Locations

Unattended noise monitoring was completed in the study area as part of the EIS. The noise monitoring equipment continuously measured existing noise levels in 15-minute periods during the daytime, evening and night-time. This data has been used in this ONR to validate the operation road noise model (see **Section 4.3**).

The noise monitoring locations used for validation of the noise model are shown in **Figure 1** and the measured existing noise levels are summarised in **Table 2**.

Table 2 Summary of Unattended Noise Monitoring Results (from EIS)

ID	Address	Measured Noise Level (dBA)							
		Background Noise (RBL)[1]			Average Noise (L_{Aeq})[1]			Road Traffic Average Noise (L_{Aeq})[2]	
		Day	Evening	Night	Day	Evening	Night	Day	Night
L17	6 McDougall Street, Kirribilli	55	54	45	60	58	56	60	56
L18	1/191-195 Walker Street, North Sydney	73	71	55	76	75	72	76	71
L19	91 Ridge Street, North Sydney	52	52	45	57	57	52	57	52
L21	306 Miller Street, North Sydney	52	47	36	65	63	58	64	58
L22	1/1 Bardsley Gardens, Crows Nest	53	49	41	68	67	63	68	63
L23	288 Falcon Street, Neutral Bay	61	54	44	69	68	65	71	68
L24	5 Military Road, Neutral Bay	58	54	44	72	71	67	71	68
L25	317 Ernest Street, Cammeray	58	54	41	69	66	62	69	63
L26	225 Ernest Street, Cammeray	56	52	37	68	66	61	67	61
L27	77 Rosalind Street, Cammeray	58	55	43	62	60	57	62	57
L28	53 Bellevue Street, Cammeray	64	63	47	67	67	64	67	64
L31	18/22-24 Donnelly Road, Crows Nest	58	56	38	62	61	58	62	58

Note 1: Daytime is 7 am to 6 pm, the evening is 6 pm to 10 pm and the night-time is 10 pm to 7 am.

Note 2: Operational road noise is assessed during the daytime which is 7 am to 10 pm and the night-time which is 10 pm to 7 am. See the NSW EPA *Road Noise Policy*.

3 Operational Noise Criteria

Minster's Condition of Approval E89(a) requires the ONR to confirm the appropriate operational noise objectives for the project.

3.1 Road Traffic Noise

The NSW *Road Noise Policy* (RNP) is used to assess and manage potential airborne noise impacts from road infrastructure projects in NSW.

This assessment is undertaken with guidance from the *Road Noise Criteria Guideline* (RNCG) which is TfNSW's interpretation of the RNP and provides a consistent approach to identifying road noise criteria for TfNSW infrastructure projects.

The RNP and RNCG provide non-mandatory criteria for residential and 'other sensitive' land uses. Where a project results in road traffic noise levels which are predicted to be above the criteria, the project should investigate feasible and reasonable noise mitigation measures to minimise the impacts.

The RNP and RNCG use the following terms to describe and assess the impacts from road projects:

- '**No Build**' – the assessment scenario used to predict noise levels if the project were not to go ahead
- '**Build**' – the assessment scenario used to predict noise levels with the project.

The difference between the 'Build' and the 'No Build' noise levels is used to determine the impact of the project.

This ONR also uses a '**Final Build**' scenario. This assessment scenario is used to predict noise levels from the project after the application of all feasible and reasonable source and pathway additional noise mitigation measures (ie low noise pavements and noise barriers, where relevant).

Residential Receivers

The RNCG defines separate criteria for 'new' and 'redeveloped' roads. The 'new' road criteria apply when a project proposes road construction in an undeveloped corridor or when an existing road's functional class is changed. The 'redeveloped' criteria apply when a project is in an existing road corridor and the existing road is not substantially realigned.

Transition zones may be applicable where a project has both 'new' and 'redeveloped' roads. The intent of a transition zone is to provide a smooth change in noise criteria at adjacent receivers.

The relevant noise criteria for residential receivers affected by road traffic noise are shown in **Table 3**.

Table 3 RNCG Criteria for Residential Receivers

Road Category	Type of Project/Land Use	Assessment Criteria (dBA)	
		Daytime (7 am – 10 pm)	Night-time (10 pm – 7 am)
Freeway/ arterial/ sub-arterial roads	Existing residences affected by noise from **new** freeway/arterial/sub-arterial road corridors	$L_{Aeq(15\ hour)}$ 55 (external)	$L_{Aeq(9\ hour)}$ 50 (external)
	Existing residences affected by noise from **redevelopment** of existing freeway/arterial/sub-arterial roads	$L_{Aeq(15\ hour)}$ 60 (external)	$L_{Aeq(9\ hour)}$ 55 (external)
	Existing residences affected by both new roads and the redevelopment of existing freeway/arterial/sub-arterial roads in a **transition zone**[1]	Between $L_{Aeq(15hour)}$ 55-60 (external)	Between $L_{Aeq(9hour)}$ 50-55 (external)
	Existing residences affected by increases in traffic noise of 12 dB or more from **redevelopment** of existing freeway/arterial/sub-arterial roads[2]	Between $L_{Aeq(15hour)}$ 42-60 (external)	Between $L_{Aeq(9hour)}$ 42-55 (external)

Note 1: The criteria are assigned to the entire residence and depend on the proportion of noise coming from the new and redeveloped roads.

Note 2: The relative increase criterion at each facade is determined from the existing traffic noise level plus 12 dB.

The RNP and RNCG require noise to be assessed at project opening and for a future design year, which is typically ten years after opening. For this project, the at-opening year is 2027 and the future design year is 2037.

'Other Sensitive' Land Uses

Several 'other sensitive' non-residential land uses have been identified in the study area. The noise criteria for these receivers are shown in **Table 4**. The RNCG does not consider commercial and industrial receivers as being sensitive to operational airborne road traffic noise impacts.

Table 4 RNCG Criteria for Other Sensitive Receivers

Existing Sensitive Land Use	Assessment Criteria (dB)		Additional Considerations
	Daytime (7 am – 10 pm)	Night-time (10 pm – 7 am)	
1. School classrooms	$L_{Aeq(1\ hour)}$ 40 (internal)[1]	-	In the case of buildings used for education or health care, noise level criteria for spaces other than classrooms and wards may be obtained by interpolation from the 'maximum' levels shown in Australian Standard 2107:2000 (Standards Australia 2000).
2. Hospital wards	$L_{Aeq(1\ hour)}$ 35 (internal)	$L_{Aeq(1\ hour)}$ 35 (internal)	
3. Places of worship	$L_{Aeq(1\ hour)}$ 40 (internal)[1]	$L_{Aeq(1\ hour)}$ 40 (internal)[1]	The criteria are internal, ie the inside of a church. Areas outside the place of worship, such as a churchyard or cemetery, may also be a place of worship. Therefore, in determining appropriate criteria for such external areas, it should be established what is in these areas that may be affected by road traffic noise.
4. Open space (active use	$L_{Aeq(15\ hour)}$ 60 (external)	-	Active recreation is characterised by sporting activities and activities which generate their own noise or focus for participants, making them less sensitive to external noise intrusion.

Existing Sensitive Land Use	Assessment Criteria (dB)		Additional Considerations
	Daytime (7 am – 10 pm)	Night-time (10 pm – 7 am)	
5. Open space (passive use)	$L_{Aeq(15\ hour)}$ 55 (external)	-	Passive recreation is characterised by contemplative activities that generate little noise and where benefits are compromised by external noise intrusion (eg playing chess, reading).
6. Child care facilities	Sleeping rooms $L_{Aeq(1\ hour)}$ 35 (internal)[1] Indoor play areas $L_{Aeq(1\ hour)}$ 40 (internal)[1] Outdoor play areas $L_{Aeq(1\ hour)}$ 55 (external)	-	Multipurpose spaces (eg shared indoor play/sleeping rooms) should meet the lower of the respective criteria. Measurements for sleeping rooms should be taken during designated sleeping times for the facility, or if these are not known, during the highest hourly traffic noise level during the opening hours of the facility.
7. Aged care facilities	-	-	The criteria for residential land uses should be applied to these facilities.

Note 1: The criteria are specified as an internal noise level for this receiver category. As the noise model predicts external noise levels, it has been conservatively assumed that all schools and places of worship have openable windows and external noise levels are 10 dB higher than the corresponding internal level, which is representative of windows being partially open to provide ventilation.

The RNCG residential criteria are applicable to hotels which have staff who reside permanently on site, noting that only areas of permanent residence require assessment.

3.1.2 Potential Road Traffic Noise Impacts on the Surrounding Road Network

Where a project results in traffic redistribution, noise impacts can occur on the surrounding road network due to vehicles using different routes after the project is complete. The RNCG criteria (see **Table 3**) are therefore to be applied to the surrounding road network where a road project generates an increase in road traffic noise of more than 2.0 dB.

3.2 Noise Mitigation

The TfNSW *Road Noise Mitigation Guideline* (RNMG) provides guidance in managing and controlling road traffic noise and describes the principles to be applied when reviewing noise mitigation. The RNMG recognises that the RNCG criteria are not always practicable and that it is not always feasible or reasonable to expect that they are achieved.

The RNMG provides three triggers where a receiver may qualify for consideration of 'additional noise mitigation'. These are:

- **Trigger 1** – the predicted 'Build' noise level exceeds the RNCG controlling criterion and the noise level increase due to the project (ie the noise predictions for the 'Build' minus the 'No Build') is greater than 2.0 dB
- **Trigger 2** – the predicted 'Build' noise level is 5 dB or more above the RNCG controlling criterion (ie exceeds the cumulative limit) and the receiver is significantly influenced by project road noise, regardless of the incremental impact of the project
- **Trigger 3** – the noise level contribution from the road project is acute (daytime $L_{Aeq(15hour)}$ 65 dBA or higher, or night-time $L_{Aeq(9hour)}$ 60 dBA or higher) even if noise levels are controlled by a non-project road.

The eligibility of receivers for consideration of 'additional noise mitigation' is determined before the benefit of low noise pavement and noise barriers is included. The requirement for the project is to provide feasible and reasonable additional mitigation to eligible receivers with the aim of meeting the RNCG controlling criterion.

For receivers that qualify for consideration of 'additional noise mitigation', potential noise mitigation measures are to be considered in the following order of preference:

- At-source mitigation:
  - Quieter road pavement surfaces
- In-corridor mitigation:
  - Noise mounds
  - Noise barriers
- At-receiver mitigation:
  - At-property treatments.

4 Methodology

4.1 Noise Model

A noise model of the study area has been used to predict noise levels from the operation of the project to the surrounding receivers. The model uses Calculation of Road Traffic Noise (CoRTN) (UK Department of Transport, 1988) algorithms in SoundPLAN V8.1 software.

Local terrain, receiver buildings and structures were digitised in the noise model to develop a three-dimensional representation of the project and surrounding areas.

The '**No Build**' scenarios use the existing road alignment geometry, with all existing structures and features within the road corridor included.

The '**Build**' scenarios use the design of the project, which includes all new roads and changes to existing ground levels such as cuttings and embankments.

The '**Final Build**' scenarios use the design of the project, which includes all new roads and changes to existing ground levels such as cuttings and embankments, and also include the noise benefit of all feasible and reasonable at-source and in-corridor additional noise mitigation measures.

A single noise model has been used to assess the potential operational road noise impacts from the project for both this ONR and the TfNSW Noise Insulation Program (NIP). This ensures consistency between the outcomes of the ONR assessment and the treatments delivered as part of the NIP. The NIP is discussed in further detail in **Section 5.2.3.1**.

4.1.1 Warringah Freeway Upgrade and Western Harbour Tunnel Modelling

The build noise modelling scenario uses the final state of the project which includes:

- Road alignment for all surface works associated with the project (ie the Warringah Freeway Upgrade and surrounding area)
- Western Harbour Tunnel mainline tunnels
- Western Harbour Tunnel northbound exit portal to Falcon Street and southbound entry portal from Berry Street
- Beaches Link northbound and southbound entry portals.

Operational noise impacts associated with Western Harbour Tunnel ventilation fans and operational buildings will be addressed in the Western Harbour Tunnel Fixed Facility ONR.

4.1.2 Project and Non-Project Roads

Roads where design or engineering changes are proposed as part of the project are considered as 'project' roads. Existing roads with no upgrades or work occurring are considered 'non-project'.

All major roads in the study area have been modelled together with major roads on the surrounding road network to determine the contributions from 'project' and 'non-project' roads at individual receivers, as required by the RNCG. Project and non-project roads are shown in **Appendix B**.

4.1.3 Transition Zones

The RNCG requires transition zones to be applied at the point where road categories change from 'new' to 'redeveloped' to provide a smooth transition in noise criteria.

Transition zones have been calculated for the project's detailed design alignment. Consistent with the EIS, transition zones do not impact any sensitive receivers and 'redeveloped' operational road traffic criteria has been applied to all receivers.

4.2 Design Inputs

Further details on the noise modelling parameters used in the assessment are shown in **Table 5**.

Table 5 Summary of Noise Model Inputs and Parameters

Input Parameter	Source of Data
Noise assessment algorithm	Calculation of Road Traffic Noise (CoRTN), consistent with the EIS.
Ground topography	The noise model includes a 'digital ground model' which is an accurate 3D representation of the terrain in the study area. The ground model was constructed from a combination of surveyed road corridor data, LIDAR point cloud data and 1 m contours. The ground model has been updated to include the detailed design of the project, including the design for Berry Street and Falcon Street access ramps to/from the Western Harbour Tunnel.
Buildings, receiver locations and floors	Buildings can provide screening to more distant locations of the study area. The buildings in the noise model were taken from a dataset provided by TfNSW. A detailed land use survey has been completed in the study area (as required by CoA E65) using information collected during ONR and NIP related site inspections, combined with review of current aerial photography. Updates to the noise model have been made iteratively as the ONR and NIP assessments have progressed. Updates include correcting receiver classifications, building outlines, number of floors in buildings and building elevations, where necessary. The model predicts noise to facade of every identified receiver in the assessment area at a height of 1.5 m above floor level. Multi-storey apartment buildings near to the project have been split into individual units based on strata plans. All other buildings have been modelled as single buildings within the noise model, with the appropriate number of floors applied to each building. These buildings include single dwellings/houses and/or multi-storey apartment buildings that are distant from the project. Floor heights have been calculated based on the building height and number of floors and are generally between 2.8 m and 4 m.
Noise barriers	Existing noise barriers in the study area were taken from 3D survey data. The designs of all future project related noise barriers were provided by the project team.
Study area	The operational study area extends 600 m from the centre of the outside lanes of the project roads as required by the RNCG. The study area is cut at the northern and southern extents of the physical road work. The RNCG notes that where a project is within a highly urban area, the boundary width of the study may be reduced to where the noise levels from the project contribute slightly less than half of the total noise level. This approach has been used when defining the study area for the assessment and is shown in **Appendix B**.
Assessment timeframes	The project is assessed 'at-opening' in 2027 and in the 'future design' year in 2037.

Input Parameter	Source of Data
Traffic volumes	Existing traffic volumes were measured at the same time as the noise monitoring survey as part of the EIS. This data was used to model the existing situation and validate the operational noise model. The forecast traffic volumes for the 2027 and 2037 assessment scenarios, and validation period, were taken from the EIS noise model[1] (see Appendix D in the EIS Noise and Vibration Technical Working Paper). The '**Do Minimum**' traffic scenarios represent the 'No Build' of the Warringah Freeway Upgrade and Western Harbour Tunnel project. These are the 'without project' traffic scenarios. The '**Do Something (Interim)**' and '**Do Something (Cumulative)**' 'Build' traffic scenarios have been used to determine the impacts from the project and mitigation requirements. The **'Do Something (Interim)'** build traffic scenarios include the Western Harbour Tunnel and Warringah Freeway Upgrade project and full WestConnex (Stages 1, 2 and 3). The **'Do Something (Cumulative)'** build traffic scenarios include the Western Harbour Tunnel and Warringah Freeway Upgrade project, full WestConnex (Stages 1, 2 and 3), and Beaches Link and Gore Hill Freeway Connection, Sydney Gateway and the F6 Extension (all stages). The proportion of heavy vehicles on the Warringah Freeway is generally low and around 5% of the total traffic volumes. As such, no traffic mix corrections to account for different source noise levels for heavy vehicles have been applied in the noise model as they would not significantly affect the predictions. Corrections are generally only applied where heavy vehicles account for around 20% or more of total traffic.

<table>
<tr><th>Input Parameter</th><th>Source of Data</th></tr>
<tr><td rowspan="4">Vehicle speed</td><td colspan="2">Existing vehicle speeds were measured during the noise monitoring survey and used to validate the noise model.

• Warringah freeway on/off ramps (50-80 km/hr)</td></tr>
<tr><td>Source heights and source correction</td><td colspan="2">Vehicles generally emit road traffic noise at four source heights. These are represented in the noise model by the following:
• Cars (at 0.5 m height with a source correction of 0.0 dB)
• Truck tyres (at 0.5 m height with a source correction of -5.4 dB)
• Truck engines (at 1.5 m height with a source correction of -2.4 dB)
• Truck exhausts (at 3.6 m height with a source correction of -8.5 dB).</td></tr>
</table>

Input Parameter	Source of Data
Road pavement surface corrections	The existing road surfaces include Dense Grade Asphalt (DGA) with small sections of Continuously Reinforced Concrete Pavement (CRCP). The future road surface is Stone Mastic Asphalt (SMA) on mainline carriageways (see **Section 7.1** for further discussion regarding this), and either SMA or DGA on ramps. The following road surface corrections, taken from the TfNSW *Road Noise Model Validation Guideline* and EIS, have been used in the noise model: • 0 dB for DGA and SMA • +3 dB for CRCP.
Tunnel portals	The noise model accounts for increases in noise near to all existing and future tunnel portals (implemented via the tunnel opening feature of SoundPLAN). The location of all tunnel portals is shown on the project/non-project road figure in **Appendix B**.
Ground absorption	Noise levels at receivers can be influenced by the type of ground between the source of noise and the receiver. A ground absorption factor of 50% has been used in the noise model for suburban areas as detailed in the TfNSW *Road Noise Model Validation Guideline* for residential areas.
General corrections	The model includes the following corrections to convert the noise model outputs to the appropriate assessment noise levels: • Facade reflections +2.5 dB • L_{A10} to L_{Aeq} -3 dB.
Maximum search radius	3000 m for contours and 1000 m for individual predictions, consistent with the EIS.
Noise contour map settings	Grid spacing = 50 m, consistent with the EIS Height above ground = 1.5 m All noise contour maps are free field.

Note 1: The EIS traffic has been modified in certain locations for use in the detailed design model, such as where the detailed design has changed the road design from the EIS design (ie rearranged curb dividers between various carriageways, etc).

4.3 Noise Model Validation

Minister's Condition of Approval E89(b) requires the ONR to use an appropriately validated noise model.

The operational road traffic noise was validated using the noise levels and traffic counts measured as part of the EIS. The validation measurement sites are shown in **Figure 1** and a summary of the model validation is provided in **Table 6**.

Table 6 Noise Model Validation

Location[1]		Noise Level (dBA)					
		Daytime $L_{Aeq(15hour)}$			Night-time $L_{Aeq(9hour)}$		
		Measured	Predicted	Difference[1]	Measured	Predicted	Difference[1]
L17	6 McDougall Street, Kirribilli	59.9	59.3	-0.6	55.8	54.7	-1.1
L18	1/191-195 Walker Street, North Sydney	76.1	75.3	-0.8	71.3	71.2	-0.1
L19	91 Ridge Street, North Sydney	57.3	58.0	0.7	52.0	53.7	1.7
L21	306 Miller Street, North Sydney	64.1	65.2	1.1	57.9	58.8	0.9
L22	1/1 Bardsley Gardens, Crows Nest	67.9	69.4	1.5	62.9	63.6	0.7
L23	288 Falcon Street, Neutral Bay	71.4	72.8	1.4	68.0	68.5	0.5
L24	5 Military Road, Neutral Bay	71.2	72.9	1.7	67.5	68.0	0.5
L25	317 Ernest Street, Cammeray	68.5	69.7	1.2	62.6	62.4	-0.2
L26	225 Ernest Street, Cammeray	67.3	66.6	-0.7	61.3	59.5	-1.8
L27	77 Rosalind Street, Cammeray	61.6	63.5	1.9	56.7	58.0	1.3
L28	53 Bellevue Street, Cammeray	67.2	67.9	0.7	63.6	62.5	-1.1
L31	18/22-24 Donnelly Road, Crows Nest	62.0	62.7	0.7	57.7	57.6	-0.1
			Median	**0.9**		**Median**	**0.2**

Note 1: Difference is Predicted minus Measured. A negative difference indicates the predicted level of road traffic noise is lower than the measured data, a positive difference indicates the predicted level is higher.

The TfNSW *Road Noise Validation Guideline* notes that noise models typically provide random scatter error of around 2 dB in most circumstances.

The above predictions show that the noise model is within the accepted tolerances at the validation sites and is valid for predicting road traffic noise levels from the project.

5 EIS Noise Assessment

5.1 Overview of EIS Impacts

The EIS noise assessment predicted the following impacts (wording taken directly from EIS):

Do Something (Interim)

- For the Warringah Freeway and surrounds, the project is predicted to typically decrease the number of receiver buildings exceeding the RNCG noise criteria when compared to the 'Do Minimum' scenario during the day and night periods. This may be due to the reduction in forecast traffic volumes as a result of the project, as traffic along existing surface roads would move to the proposed tunnels.
- The project is predicted to reduce traffic noise levels for the Warringah Freeway and surrounds at a large number of receiver buildings (average of around 75 per cent), mainly due to traffic being moved to tunnels.
- For the majority of receiver buildings within the noise catchment areas there would be either a reduction or relatively minor change in traffic noise levels due to the project. As such, any requirement for additional noise mitigation is likely to be a result of the high existing road traffic noise levels resulting in exceedances of the cumulative limit criterion or traffic noise levels being acute (day $L_{Aeq(15hour)}$ ≥65 dB(A) or night $L_{Aeq(9hour)}$ ≥ 60 dB(A)).

Do Something (Cumulative)

- For the Warringah Freeway and surrounds, when considering cumulative traffic from the project and other major road projects, the number of receiver buildings exceeding the RNCG noise criteria when compared to the 'Do Minimum' scenario during the day and night periods is predicted to typically decrease. The decrease in the number of receiver buildings may be due to the reduction in forecast cumulative traffic volumes as a result of the project and other major road projects, as traffic along existing surface roads moves to the proposed tunnels.
- The project is predicted to reduce traffic noise levels for the Warringah Freeway and surrounds at a large number of receiver buildings (around 82 per cent), mainly due to traffic moving to tunnels.
- For the majority of receiver buildings within the study areas, there would be either a reduction or relatively minor change in traffic noise levels due to the project. As such, any requirement for additional noise mitigation are primarily a result of the high existing road traffic noise levels resulting in exceedances of the cumulative limit criterion or traffic noise levels being acute (day $L_{Aeq(15hour)}$ ≥65 dB(A) or night $L_{Aeq(9hour)}$ ≥ 60 dB(A)).

The EIS determined the requirement for additional noise mitigation measures (eg noise barriers, at-property treatments) using the 2037 Do Something (Cumulative) scenario.

5.2 EIS Recommended Noise Mitigation

Minister's Condition of Approval E89(d) requires the ONR to review the suitability of the operational noise mitigation measures identified in the EIS.

5.2.1 At-source Mitigation – Quieter Pavement Surfaces

The EIS Technical Working Paper investigated the use of crumb rubber asphalt (CRA10) in the operational road noise model for some surface roads to reduce road traffic noise emissions, noting that this quieter pavement may achieve a 2 dB noise reduction compared to dense graded asphalt (DGA).

The Technical Working Paper highlighted that the use of quieter pavements would be further investigated during detailed design when further information regarding the feasibility and reasonableness of specific noise mitigation measures is available. Noting that the final road pavement surface would be subject to various requirements besides acoustic benefits, including structural integrity, skid resistance, water dispersion, maintenance and design life.

Additional investigation regarding the use of crumb rubber asphalt has been completed since completion of the EIS during detailed design. See **Section 7.1** for further details.

5.2.2 In-corridor Mitigation – Noise Barriers

Minister's Condition of Approval E182 requires operational noise barriers to be designed to minimise visual and amenity impacts and be designed in accordance with the *Noise wall design guideline – Design guideline to improve the appearance of noise walls in NSW* (RMS, March 2016).

The EIS Technical Working Paper completed a detailed assessment of all potential noise barriers for the project, as per the requirements of the TfNSW RNMG.

The TfNSW RNMG references the *Noise wall design guideline – Design guideline to improve the appearance of noise walls in NSW* and contains a process for designing feasible and reasonable noise barriers which sufficiently minimise amenity impacts. The RNMG process aims to meet the following policy principles during barrier design:

1. Communities should receive reasonable and equitable outcomes
2. Noise mitigation should be designed to reduce noise levels to the criteria
3. Incidental benefits from the noise mitigation designed for qualifying receivers should be recognised at all receivers within a community where noise levels exceed WHO guidelines
4. Noise barrier evaluation processes must:
5. Give preference to reducing outdoor noise levels and the number of at-property treatments
6. Provide efficient barrier heights and extents without disregarding lengths of effective noise barrier in front of eligible groups of receivers
7. Noise mitigation shall be evaluated and installed where feasible and reasonable.

The EIS noted that the recommended noise barrier designs may not always be feasible to build when considered non-acoustic factors such as roadway and stormwater flow obstruction, access requirements, space limitations, wind loading and unsuitable ground conditions, and that the noise barrier designs would be further investigated during detailed design.

The EIS recommended noise barriers are shown in **Figure 2** and detailed in **Table 7**. Further details regarding the detailed design noise barriers are provided in **Section 7.2**.

Table 7 EIS Recommended Noise Barriers

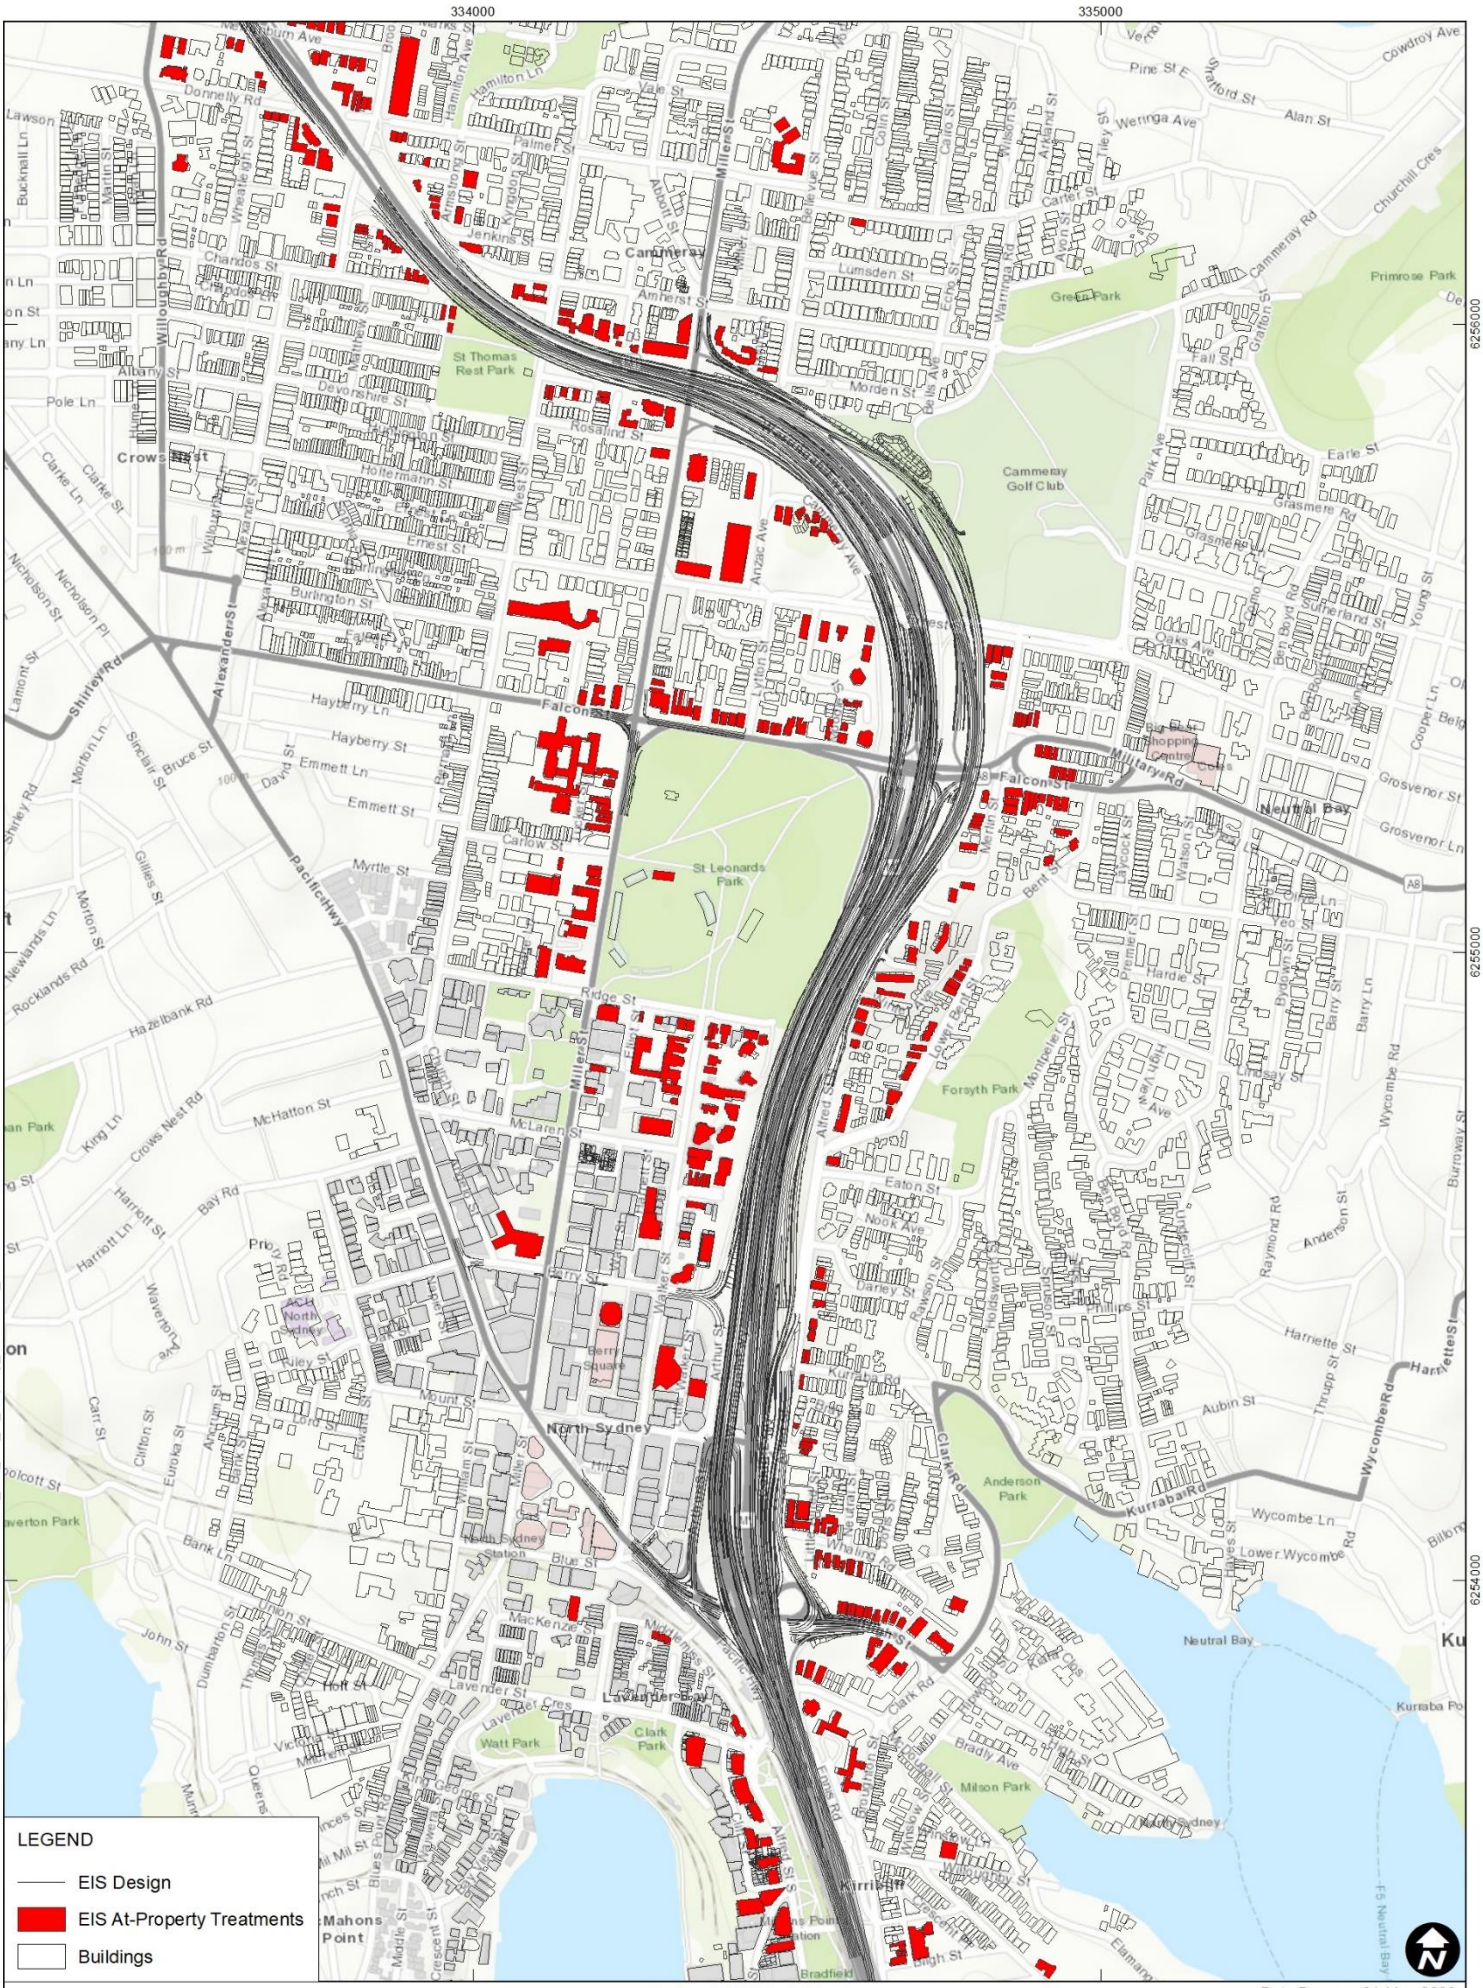

Reference		Type	Recommended Details in EIS		Comments
EIS	Detailed Design		Height[1]	Approx. Length	
WFNB_001	NW01	New	4.0 m	67 m	The EIS specified a design height of 4 m taking into consideration urban design, visual impacts and constructability constraints.
WFNB_002	-	New	5.0 m	92 m	This noise barrier is part of Western Harbour Tunnel scope. Design information for this noise barrier has been provided by TfNSW and included in the noise model.
WFNB_003	NW03	New	5.0 m	140 m	The EIS specified a design height of 5 m taking into consideration urban design, visual impacts and constructability constraints.
WFNB_004	NW04	Existing	Existing	115 m	The EIS noted that increases in height of this barrier provide minimal benefit and recommended the existing noise barrier be retained.
WFNB_005	NW05A/B	New	5.0 m	138 m	The EIS specified a design height of 5 m taking into consideration urban design, visual and overshadowing impacts and integration with the surrounding existing barrier.
WFNB_006	NW06A/B	New	4.5 m	326 m	The EIS specified a design height of 4.5 m due to urban design and visual impacts to receivers along the Miller Street on ramp and along Morden Street.
WFNB_007	-	New	n/a	-	The EIS noted this noise barrier provides minimal benefit and is not feasible or reasonable to construct due to the insufficient structural capacity of the existing bridge that it would be attached to.
WFNB_008	-	New	4.5 m	295 m	This noise barrier was constructed as part of WFU Early Works (as per approval in Condition E91(b)).
WFNB_009	NW10 NW14	New / Existing	Consistent with existing barrier height	104 m	The EIS recommended a new section of noise barrier at the southern end of this existing noise barrier at the same height as existing. The northern end of the existing noise barrier, which is located at the top of a steep cutting, was recommended to be increased in height.
WFNB_010a	NW24	Existing	4.5 m	137 m	The EIS specified a design height of 4.5 m taking into consideration urban design, visual and overshadowing impacts.
WFNB_010b	-	Existing	n/a	-	The EIS noted that increases in height of this barrier provide minimal benefit and recommended the existing noise barrier be retained.

Note 1: Height of barrier based on the height above the local ground where the proposed barrier is to be located.

5.2.3 At-receiver Mitigation – At-property Treatment

The EIS Technical Working Paper discussed that following the RNMG noise barrier analysis, any residual receivers triggered for additional noise mitigation and still exceeding the relevant traffic noise criteria would be potentially considered for at-property treatment. At-property mitigation typically involves using architectural treatments such as thicker glazing, doors, and/or upgraded facade constructions to achieve appropriate internal noise levels.

The EIS identified 369 receiver buildings as eligible for consideration of at-property treatment, noting that the number of receivers eligible would be confirmed at detailed design stage. The EIS identified receivers are shown in **Figure 3**.

5.2.3.1 TfNSW Noise Insulation Program

TfNSW developed the Noise Insulation Program (NIP) for the Western Harbour Tunnel and Warringah Freeway Upgrade to deliver at-property noise treatment to mitigate the impact of operational and construction noise at eligible properties. Minister's Conditions of Approval E84 to E87 relate to the delivery of the Noise Insulation Program.

Due to the large number of properties potentially eligible for noise treatment, TfNSW took a proactive approach in publishing the Noise Insulation Program in late 2020 before planning approval was received. The document was updated following approval of the project in January 2021.

TfNSW took this approach to allow noise mitigation measures for the project, including the delivery of at-property noise treatment, to be implement as early as possible. TfNSW is managing the delivery of the program from initial community engagement through to installation so that the project maintains control over eligibility and treatment and so that customer outcomes are prioritised.

Further details of the program are contained in the Transport for NSW document *Western Harbour Tunnel and Warringah Freeway Upgrade – Noise Insulation Program*, dated November 2022.

The NIP also contains details regarding the approach to be used for communication and engagement with property owners during the delivery of noise treatments for the project (in Section 8) and a complaints management process (in Section 9). These are discussed further in **Section 8.2** and **Section 8.3**, respectively.

5.3 Design Changes from EIS

The following design changes have been made during detailed design:

- Diverging diamond interchange at Falcon Street: the existing interchange has been retained instead of installing a new diverging diamond interchange shown in the EIS
- Shared path looped ramp from Ridge Street pedestrian bridge: the looped ramp has been replaced with a lift and straight ramp, which provides access to Alfred Street North.

These have been included in the ONR noise model and assessment.

6 Detailed Design Noise Assessment

Minster's Condition of Approval E89(a), (b) and (c) require the ONR to confirm the predicted operational noise levels and impacts from the project.

6.1 Predicted Road Traffic Noise Levels (Do Something Interim) – No Mitigation

6.1.1 Residential Receivers

The predicted operational road noise levels at residential receivers (with no mitigation) for the Do Something (Interim) scenario are summarised in **Table 8** for the 2027 at-opening and 2037 future design scenarios. The table shows the worst-case impacts in each NCA, which are typically experienced by the receivers nearest the project.

Receivers are generally most affected by the project in the daytime period in 2037 with respect to the RNCG criteria and RNMG triggers, and this scenario is considered to control the assessment in terms of determining the worst-case impacts and requirements for mitigation.

The predicted noise levels for the daytime scenario in 2037 are shown in **Figure 4**. Detailed noise predictions at all assessed receivers are in **Appendix B** for all scenarios together with operational road traffic noise contours of all scenarios. A single prediction is provided in the summary table in **Appendix B** for each floor of each assessed receiver, which represents the highest noise level of all facades on that floor.

Table 8 Predicted Noise Levels at Most Affected Residential Receivers – No Mitigation (Do Something Interim)

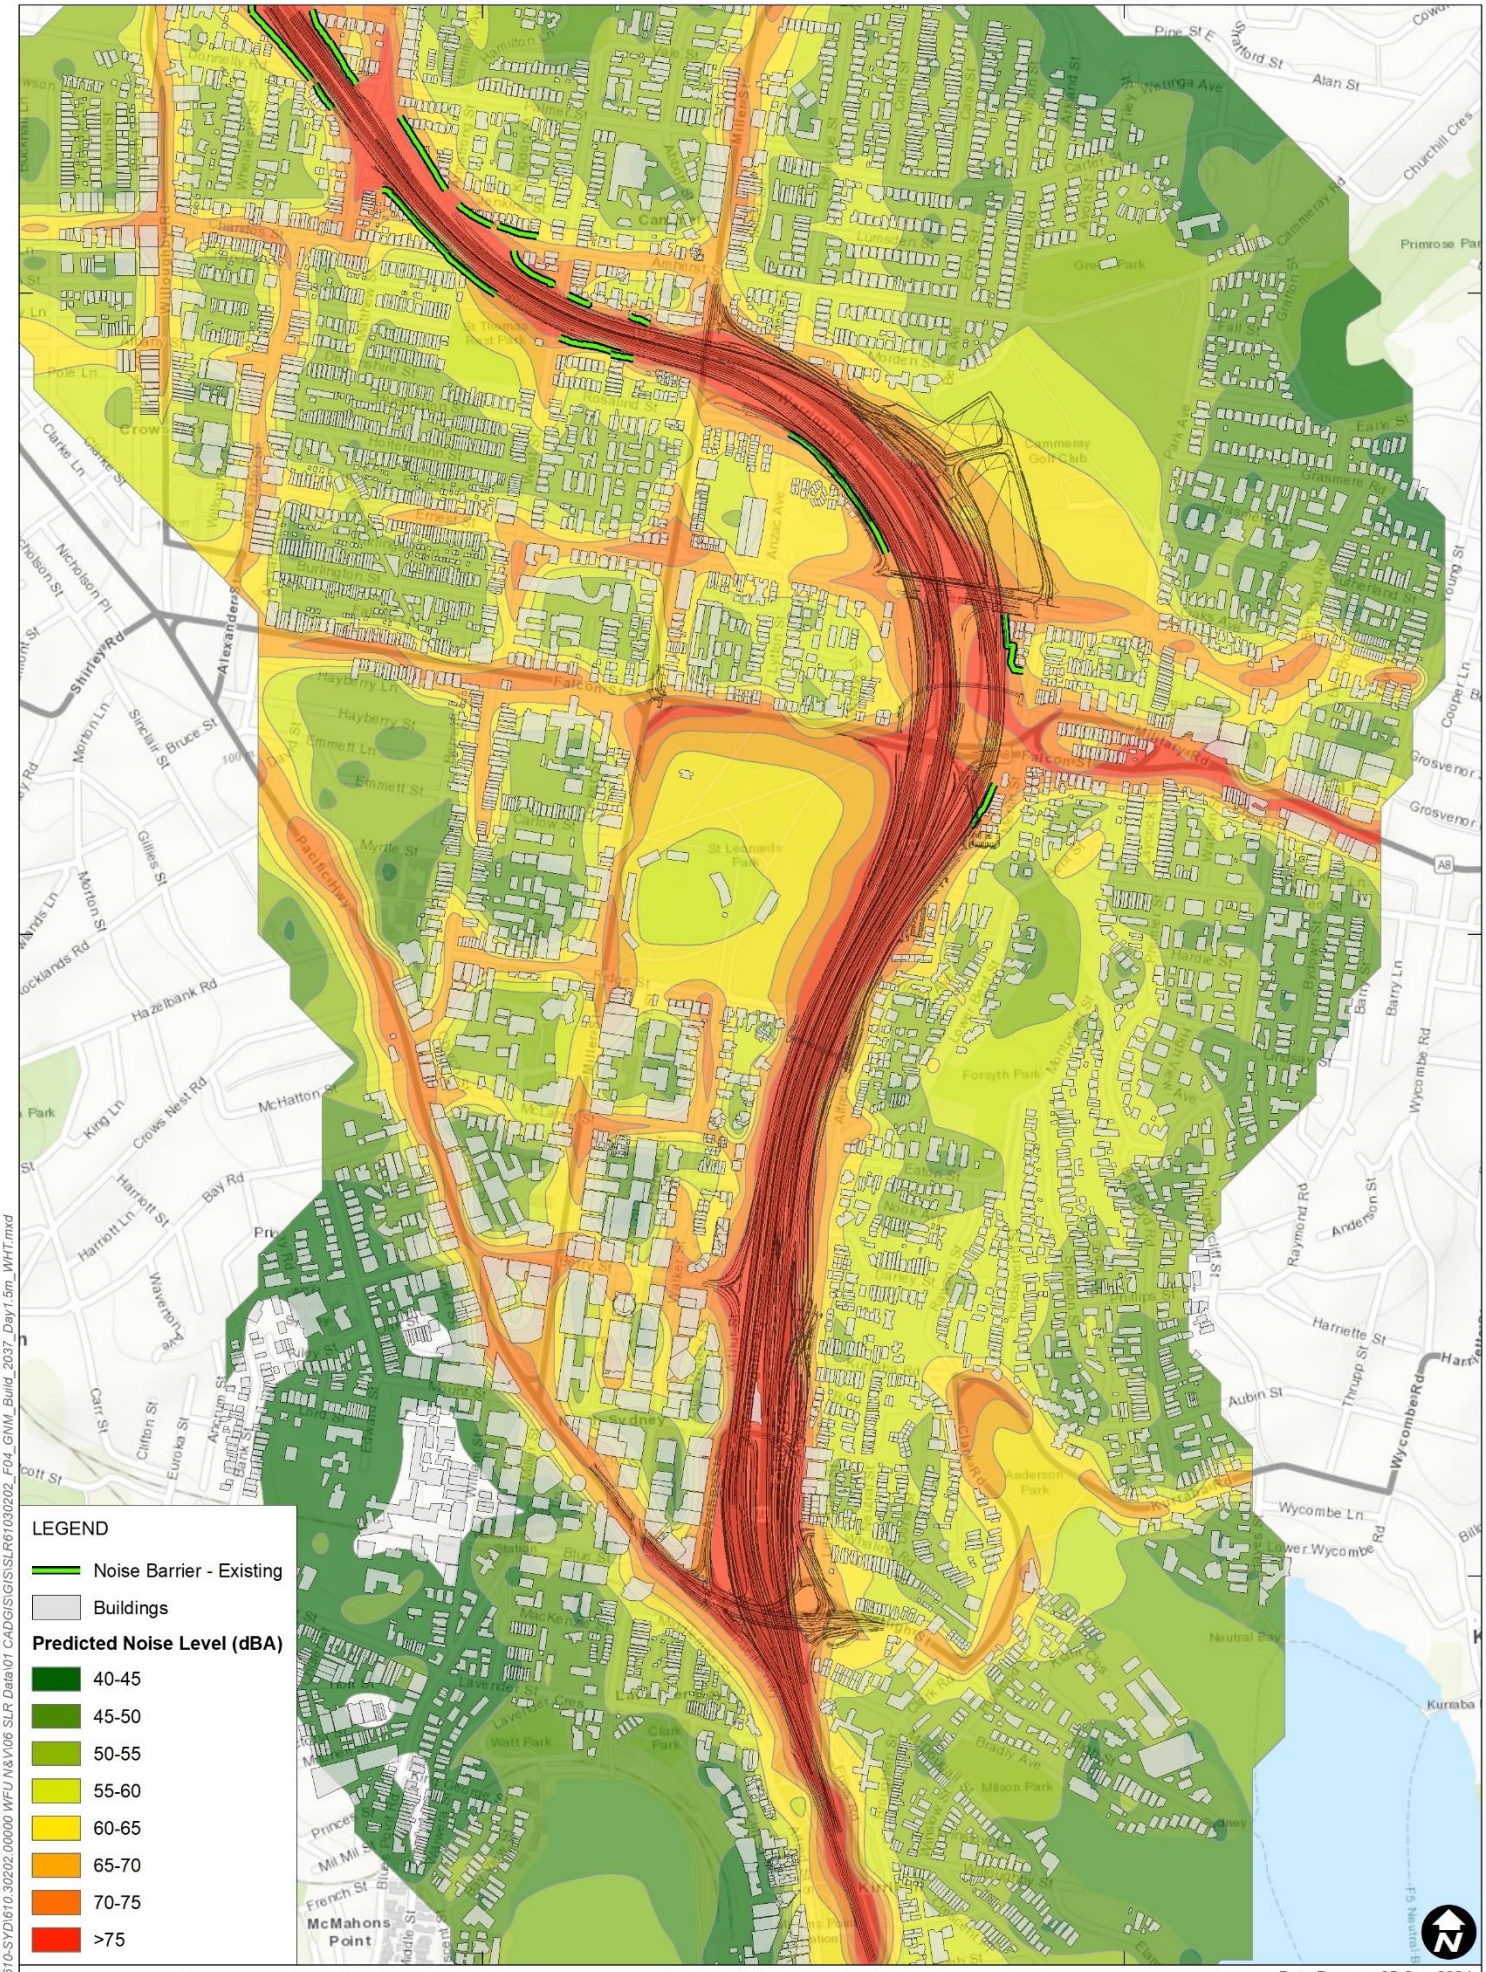

NCA	Predicted Noise Level (dBA)[1]								Number of Triggered Buildings[2]			
	At Opening (2027)				Future Design (2037)							
	No Build (without project)		Build (with project)		No Build (without project)		Build (with project)					
	Day	Night	Day	Night	Day	Night	Day	Night	Trigger 1 >2.0 dB	Trigger 2 Cumulative	Trigger 3 Acute	Total
NCA01	82	76	81	75	82	77	81	76	-	14	11	14
NCA02	75	70	75	70	75	70	75	70	-	12	12	12
NCA03	76	72	76	71	76	72	76	71	3	66	64	70
NCA04	78	75	78	75	79	76	79	76	1	2	2	2
NCA05	80	75	80	74	81	76	80	75	3	34	33	37
NCA06	80	77	79	76	81	77	79	76	26	54	50	64
NCA07	78	73	78	73	78	73	78	73	2	10	14	16
NCA08	81	76	81	76	81	76	81	76	43	52	40	86
NCA09	82	79	82	78	82	79	82	79	12	28	26	32
NCA10	81	76	80	74	82	77	80	75	2	42	34	42
NCA11	80	75	80	74	80	75	80	75	-	65	55	65
											Total	440

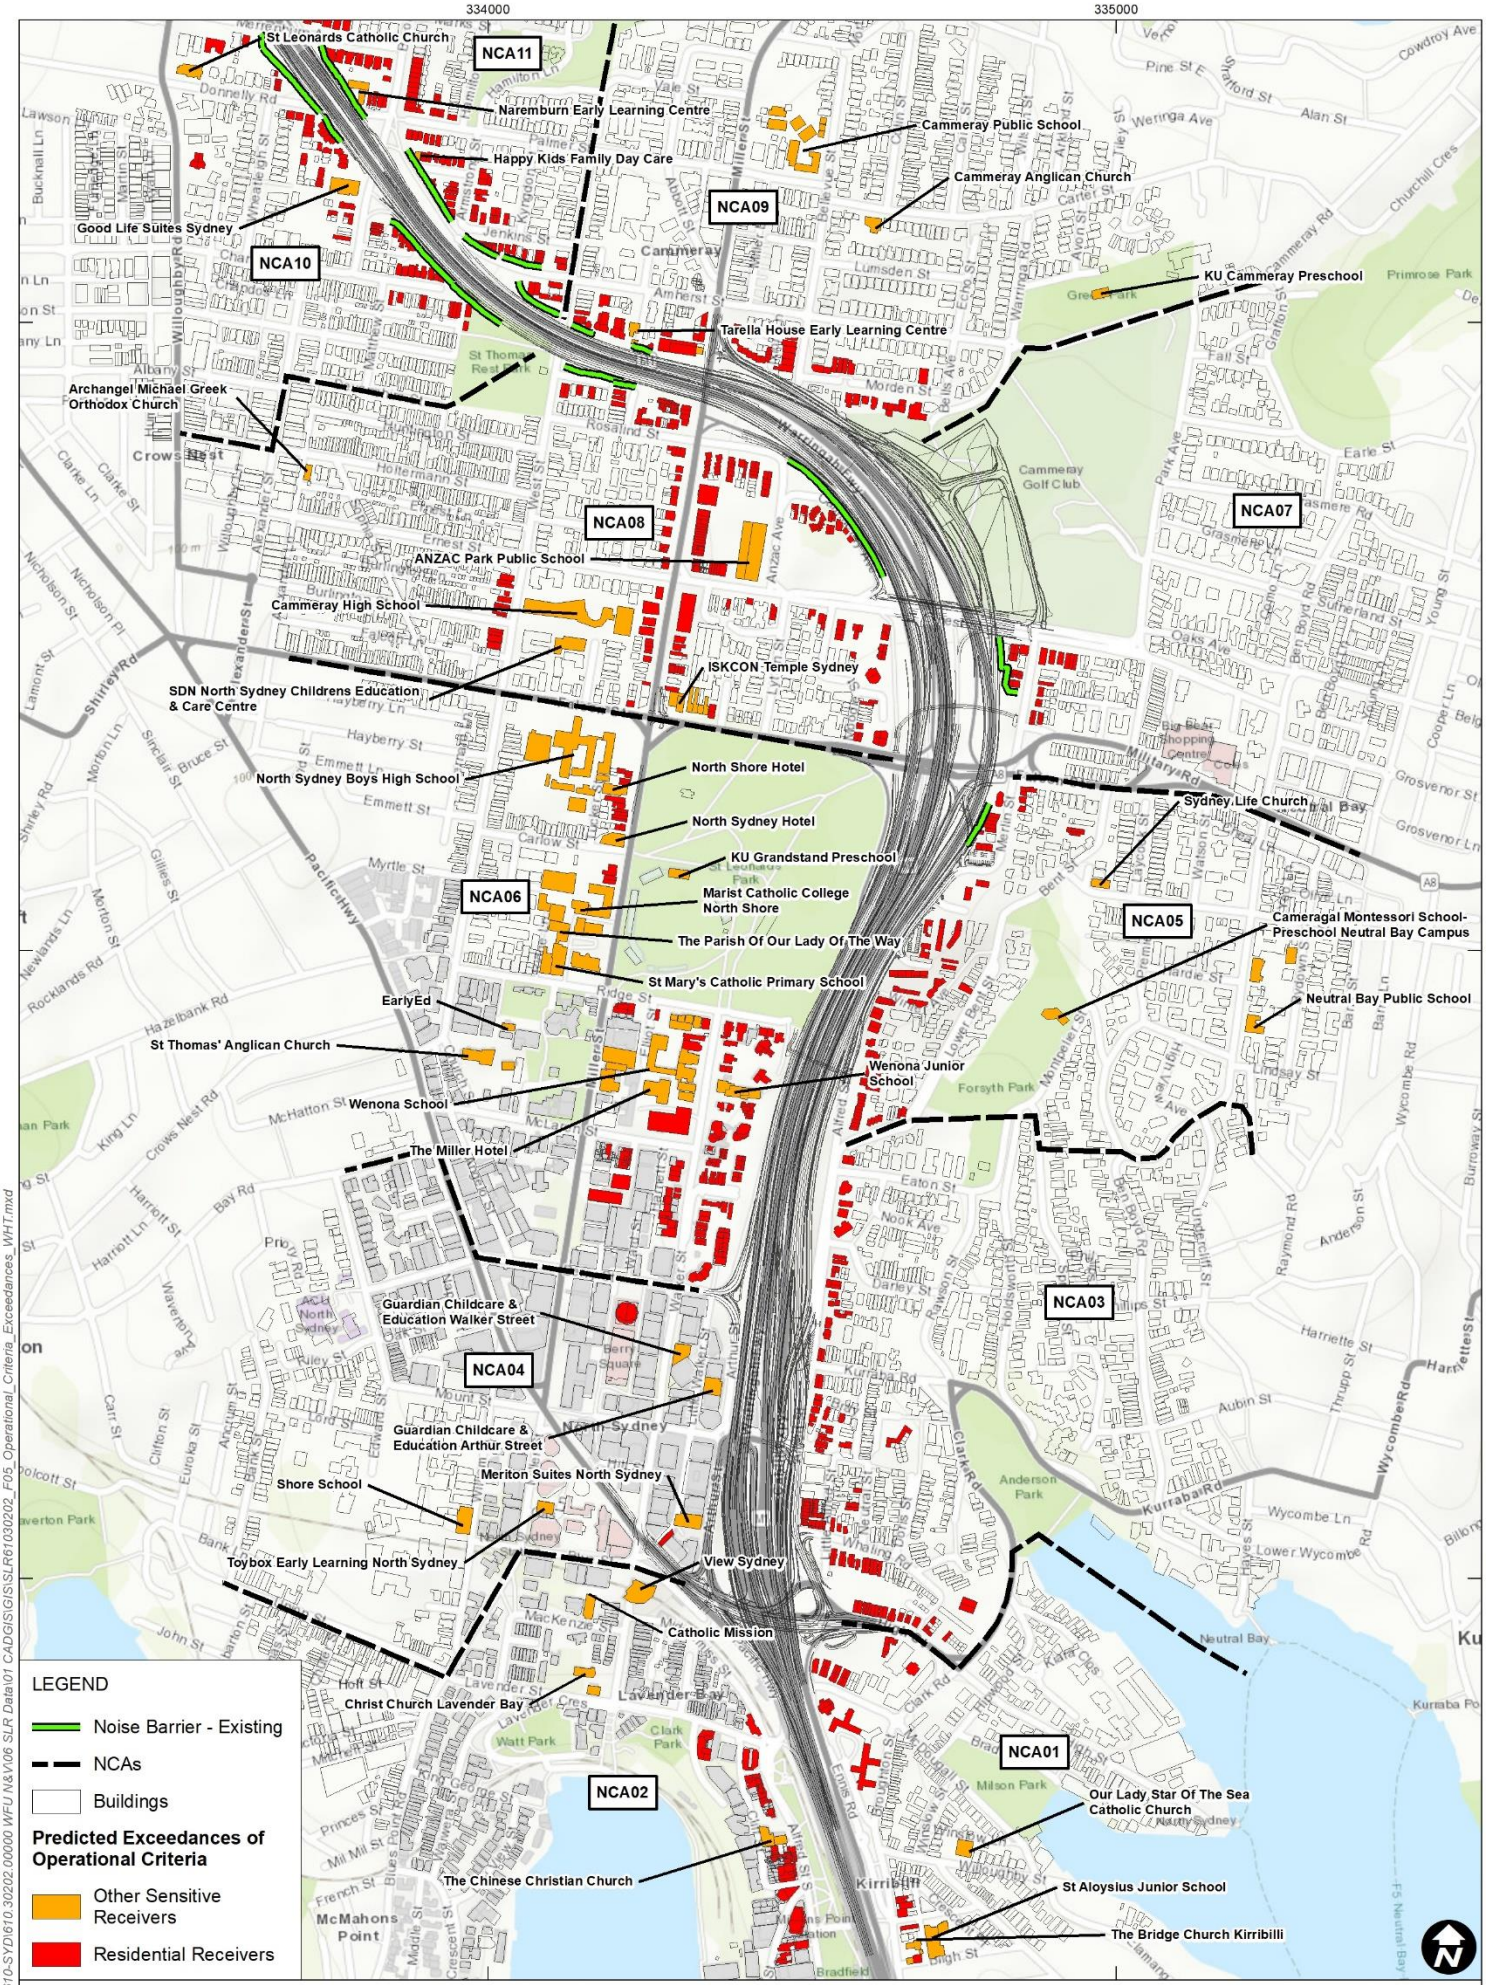

Note 1: Daytime and night-time are $L_{Aeq(15hour)}$ and $L_{Aeq(9hour)}$ noise levels, respectively.

Note 2: The RNMG triggers are discussed in **Section 2.1**. The summary counts are for individual buildings. It is noted that certain buildings are multi-storey apartment blocks. As such, the number of affected units is higher than the number of affected buildings.

In summary, the project is predicted to result in:

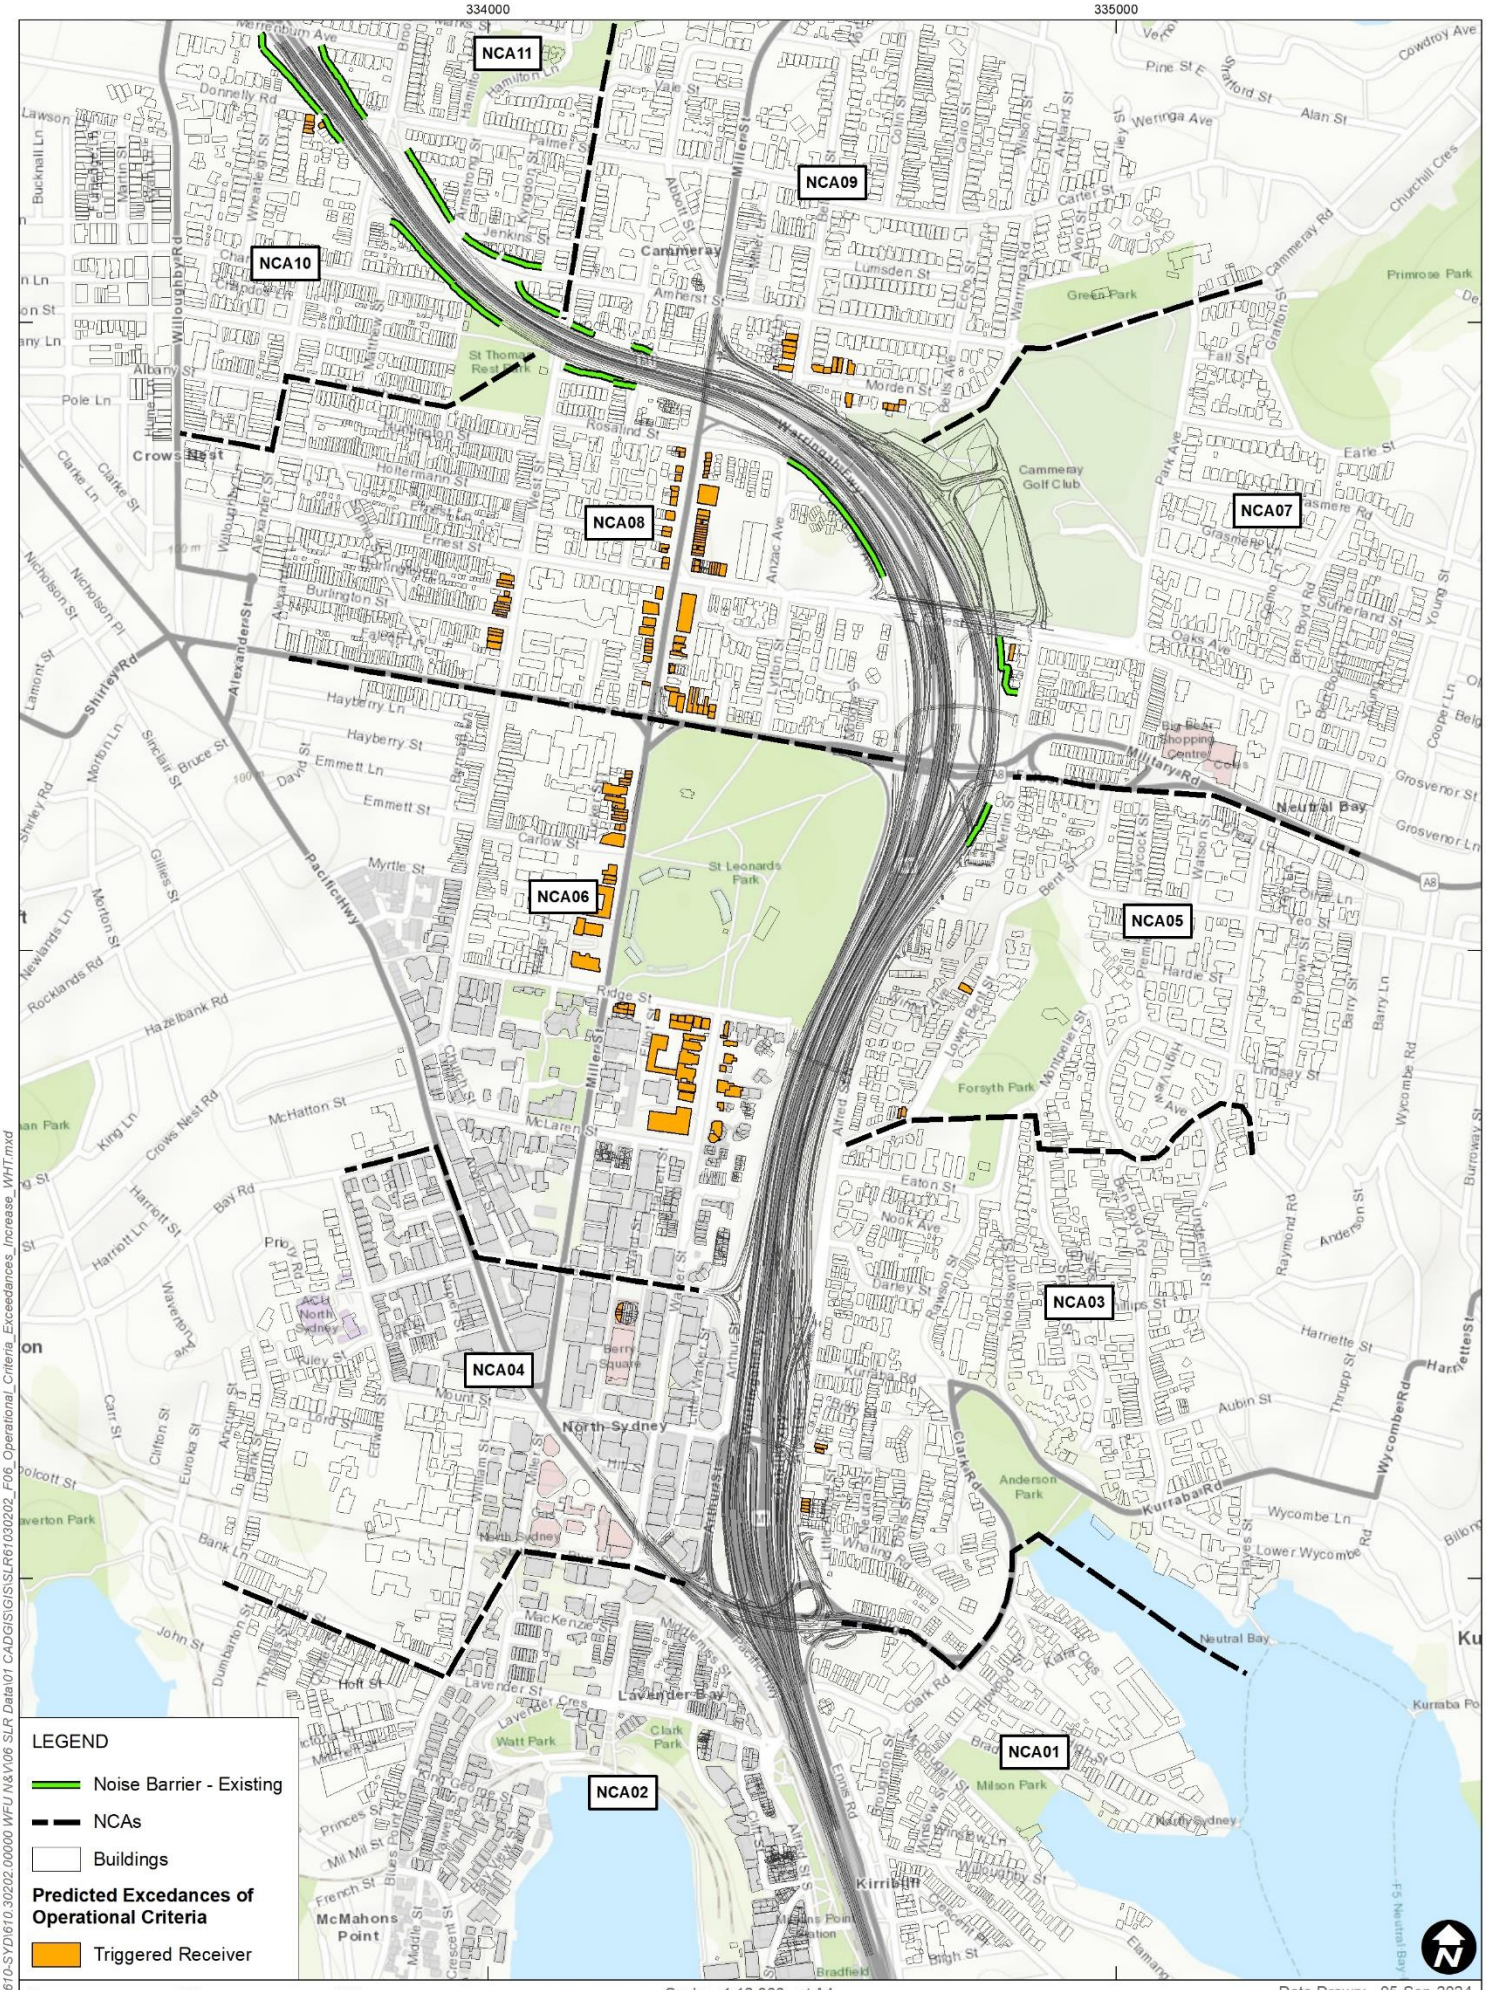

- In total, 440 residential receiver buildings are considered eligible for consideration of additional noise mitigation, as per the operational road traffic noise criteria. These receivers are shown in **Figure 5**. These triggers consist of:
  - 92 residential receiver buildings experiencing increases in traffic noise of greater than 2.0 dB. These receivers are shown in **Figure 6**.
  - 379 residential receiver buildings experiencing noise levels above the cumulative limit criteria. These receivers are shown in **Figure 7**.
  - 341 residential receiver buildings experiencing acute noise levels. These receivers are shown in **Figure 8.**
- The summary counts are for individual buildings. It is noted that certain buildings are multi-storey apartment blocks. As such, the number of affected units is higher than the number of affected buildings.

6.1.2 'Other Sensitive' Receivers

'Other sensitive' receivers that are predicted to have exceedances of the trigger levels (without mitigation) are shown in **Figure 5**. In summary, a total of 96 'other sensitive' receiver buildings are predicted to have exceedances of the operational road traffic noise criteria. Detailed noise predictions at each receiver are in **Appendix B**.

This results in a total of 536 receiver buildings (comprising of 440 residential buildings and 96 'other sensitive' buildings) that are eligible for consideration of additional mitigation in the Do Something (Interim) scenario.

6.2 Predicted Road Traffic Noise Levels (Do Something Cumulative) – No Mitigation

6.2.1 Residential Receivers

The predicted operational road noise levels at residential receivers (with no mitigation) for the Do Something (Cumulative) scenario are summarised in **Table 9** for the 2027 at-opening and 2037 future design scenarios. The table shows the worst-case impacts in each NCA, which are typically experienced by the receivers nearest the project.

Receivers are generally most affected by the project in the daytime period in 2037 with respect to the RNCG criteria and RNMG triggers, and this scenario is considered to control the assessment in terms of determining the worst-case impacts and requirements for mitigation.

The predicted noise levels for the daytime scenario in 2037 are shown in **Figure 9**. Detailed noise predictions at all assessed receivers are in **Appendix B** for all scenarios together with operational road traffic noise contours of all scenarios. A single prediction is provided in the summary table in **Appendix B** for each floor of each assessed receiver, which represents the highest noise level of all facades on that floor.

Table 9 Predicted Noise Levels at Most Affected Residential Receivers – No Mitigation (Do Something Cumulative)

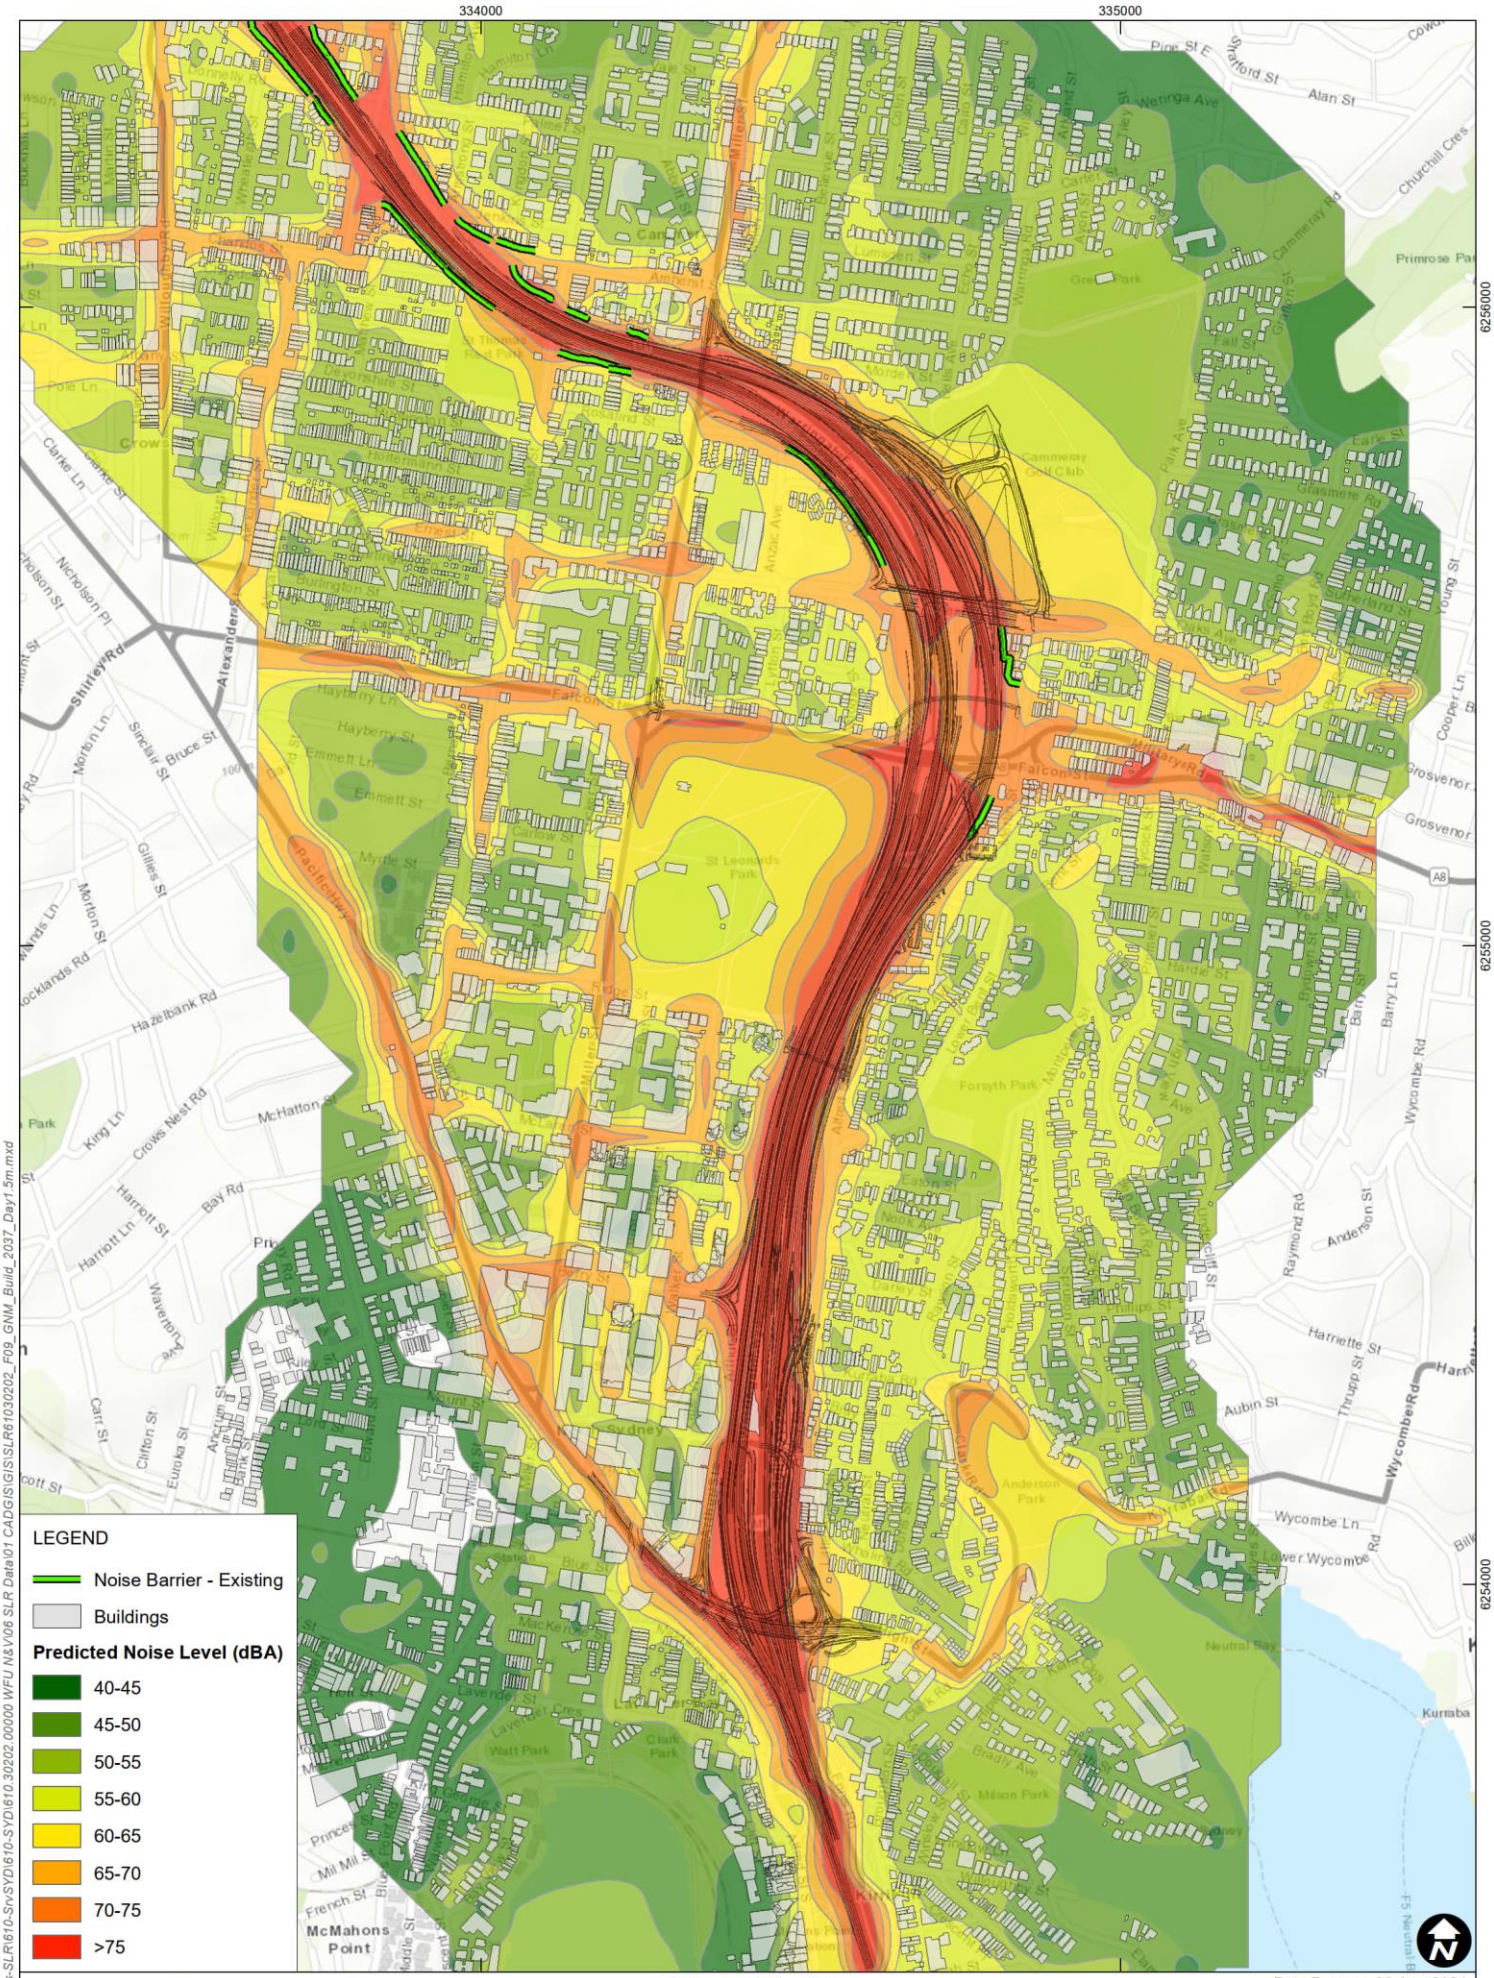

NCA	Predicted Noise Level (dBA)[1]								Number of Triggered Buildings[2]			
	At Opening (2027)				Future Design (2037)							
	No Build (without project)		Build (with project)		No Build (without project)		Build (with project)					
	Day	Night	Day	Night	Day	Night	Day	Night	Trigger 1 >2.0 dB	Trigger 2 Cumulative	Trigger 3 Acute	Total

NCA11	80	75	79	74	80	75	80	74	-	61	51	61
											Total	391

Note 1: Daytime and night-time are $L_{Aeq(15hour)}$ and $L_{Aeq(9hour)}$ noise levels, respectively.

Note 2: The RNMG triggers are discussed in **Section 2.1**. The summary counts are for individual buildings. It is noted that certain buildings are multi-storey apartment blocks. As such, the number of affected units is higher than the number of affected buildings.

In summary, the project is predicted to result in:

- In total, 391 residential receiver buildings are considered eligible for consideration of additional noise mitigation, as per the operational road traffic noise criteria. These receivers are shown in **Figure 10**. These triggers consist of:
  - 56 residential receiver buildings experiencing increases in traffic noise of greater than 2.0 dB. These receivers are shown in **Figure 11**.
  - 365 residential receiver buildings experiencing noise levels above the cumulative limit criteria. These receivers are shown in **Figure 12**.
  - 327 residential receiver buildings experiencing acute noise levels. These receivers are shown in **Figure 13.**
- The summary counts are for individual buildings. It is noted that certain buildings are multi-storey apartment blocks. As such, the number of affected units is higher than the number of affected buildings.

6.2.2 'Other Sensitive' Receivers

'Other sensitive' receivers that are predicted to have exceedances of the trigger levels (without mitigation) are shown in **Figure 10**. In summary, a total of 85 'other sensitive' receiver buildings are predicted to have exceedances of the operational road traffic noise criteria. Detailed noise predictions at each receiver are in **Appendix B**.

This results in a total of 476 receiver buildings (comprising of 391 residential buildings and 85 'other sensitive' buildings) that are eligible for consideration of additional mitigation in the Do Something (Cumulative) scenario.

7 Detailed Design Operational Mitigation

Minister's Condition of Approval E89(d) requires the ONR to review the suitability of the operational noise mitigation measures identified in the EIS and, where necessary, investigate and identify additional mitigation measures. Review of the EIS measures is provided in **Section 5.2** and **8.1**.

7.1 At-Source Mitigation – Low Noise Pavements

The EIS Technical Working Paper investigated the use of crumb rubber asphalt (CRA10) in the operational road noise model for some surface roads to reduce road traffic noise emissions from the project.

The EIS noted that the use of quieter pavements would be further investigated during detailed design when further information regarding the feasibility and reasonableness of specific noise mitigation measures is available, noting that the final road pavement surface would be subject to various requirements besides acoustic benefits, including structural integrity, skid resistance, water dispersion, maintenance and design life.

Additional investigation regarding the use of crumb rubber asphalt concluded that this pavement type is not a feasible option given the high volume of traffic and the expected frequent and cyclic braking/acceleration patterns of vehicles in the study area. This would pose a high risk of delamination and premature failure of the wearing course leading to safety issues and unplanned maintenance intervention. Mitigation of this risk would require a significantly increased maintenance schedule to maintain a low noise pavement wearing coarse which is considered both impractical and unsustainable. Regular re-sheeting and maintenance is not considered an optimal outcome for the Warringah Freeway given its exceptionally high daily traffic volumes.

Based on the above, TfNSW specified a stone mastic asphalt (SMA) pavement surface for the project's main carriageways.

Australian road noise guidelines note that SMA pavement typically results in comparable or lower noise levels relative to DGA[1][2][3][4]. Various research papers note SMA is suitable in high traffic stress areas and can retain its acoustic performance over an extended period[5][6].

7.2 In-Corridor Mitigation – Noise Barriers

Minister's Condition of Approval E182 requires operational noise barriers to be designed to minimise visual and amenity impacts and be designed in accordance with the *Noise wall design guideline – Design guideline to improve the appearance of noise walls in NSW* (RMS, March 2016). The TfNSW RNMG references the *Noise wall design guideline – Design guideline to improve the appearance of noise walls in NSW* and contains a process for designing feasible and reasonable noise barriers which sufficiently minimise amenity impacts.

The EIS Technical Working Paper completed a detailed assessment of all potential noise barriers for the project, as per the requirements of the TfNSW RNMG (see **Section 5.2.2** for further discussion regarding the feasible and reasonable assessment of noise barriers completed in the EIS).

[1] Transport for NSW, 2022, Road Noise Model Validation Guideline

[2] Queensland Department of Transport and Main Roads, 2013, Transport Noise Management Code of Practice

[3] Western Australia Planning Commission, 2019, Road and Rail Noise Guidelines

[4] Austroads, 2000, *Guide to the Selection of Road Surfacings*

[5] Greer, 2006, *Stone Mastic Asphalt - A review of its noise reducing and early life skid resistance properties*

[6] McIntosh, Wong, Macha, Buret, 2019, *Long term acoustic performance of different asphalt configurations*

The EIS noted that the recommended noise barrier designs may not be feasible to build when considering non-acoustic factors such as roadway and stormwater flow obstruction, access requirements, space limitations, wind loading and unsuitable ground conditions, and that the noise barrier designs would be further investigated during detailed design.

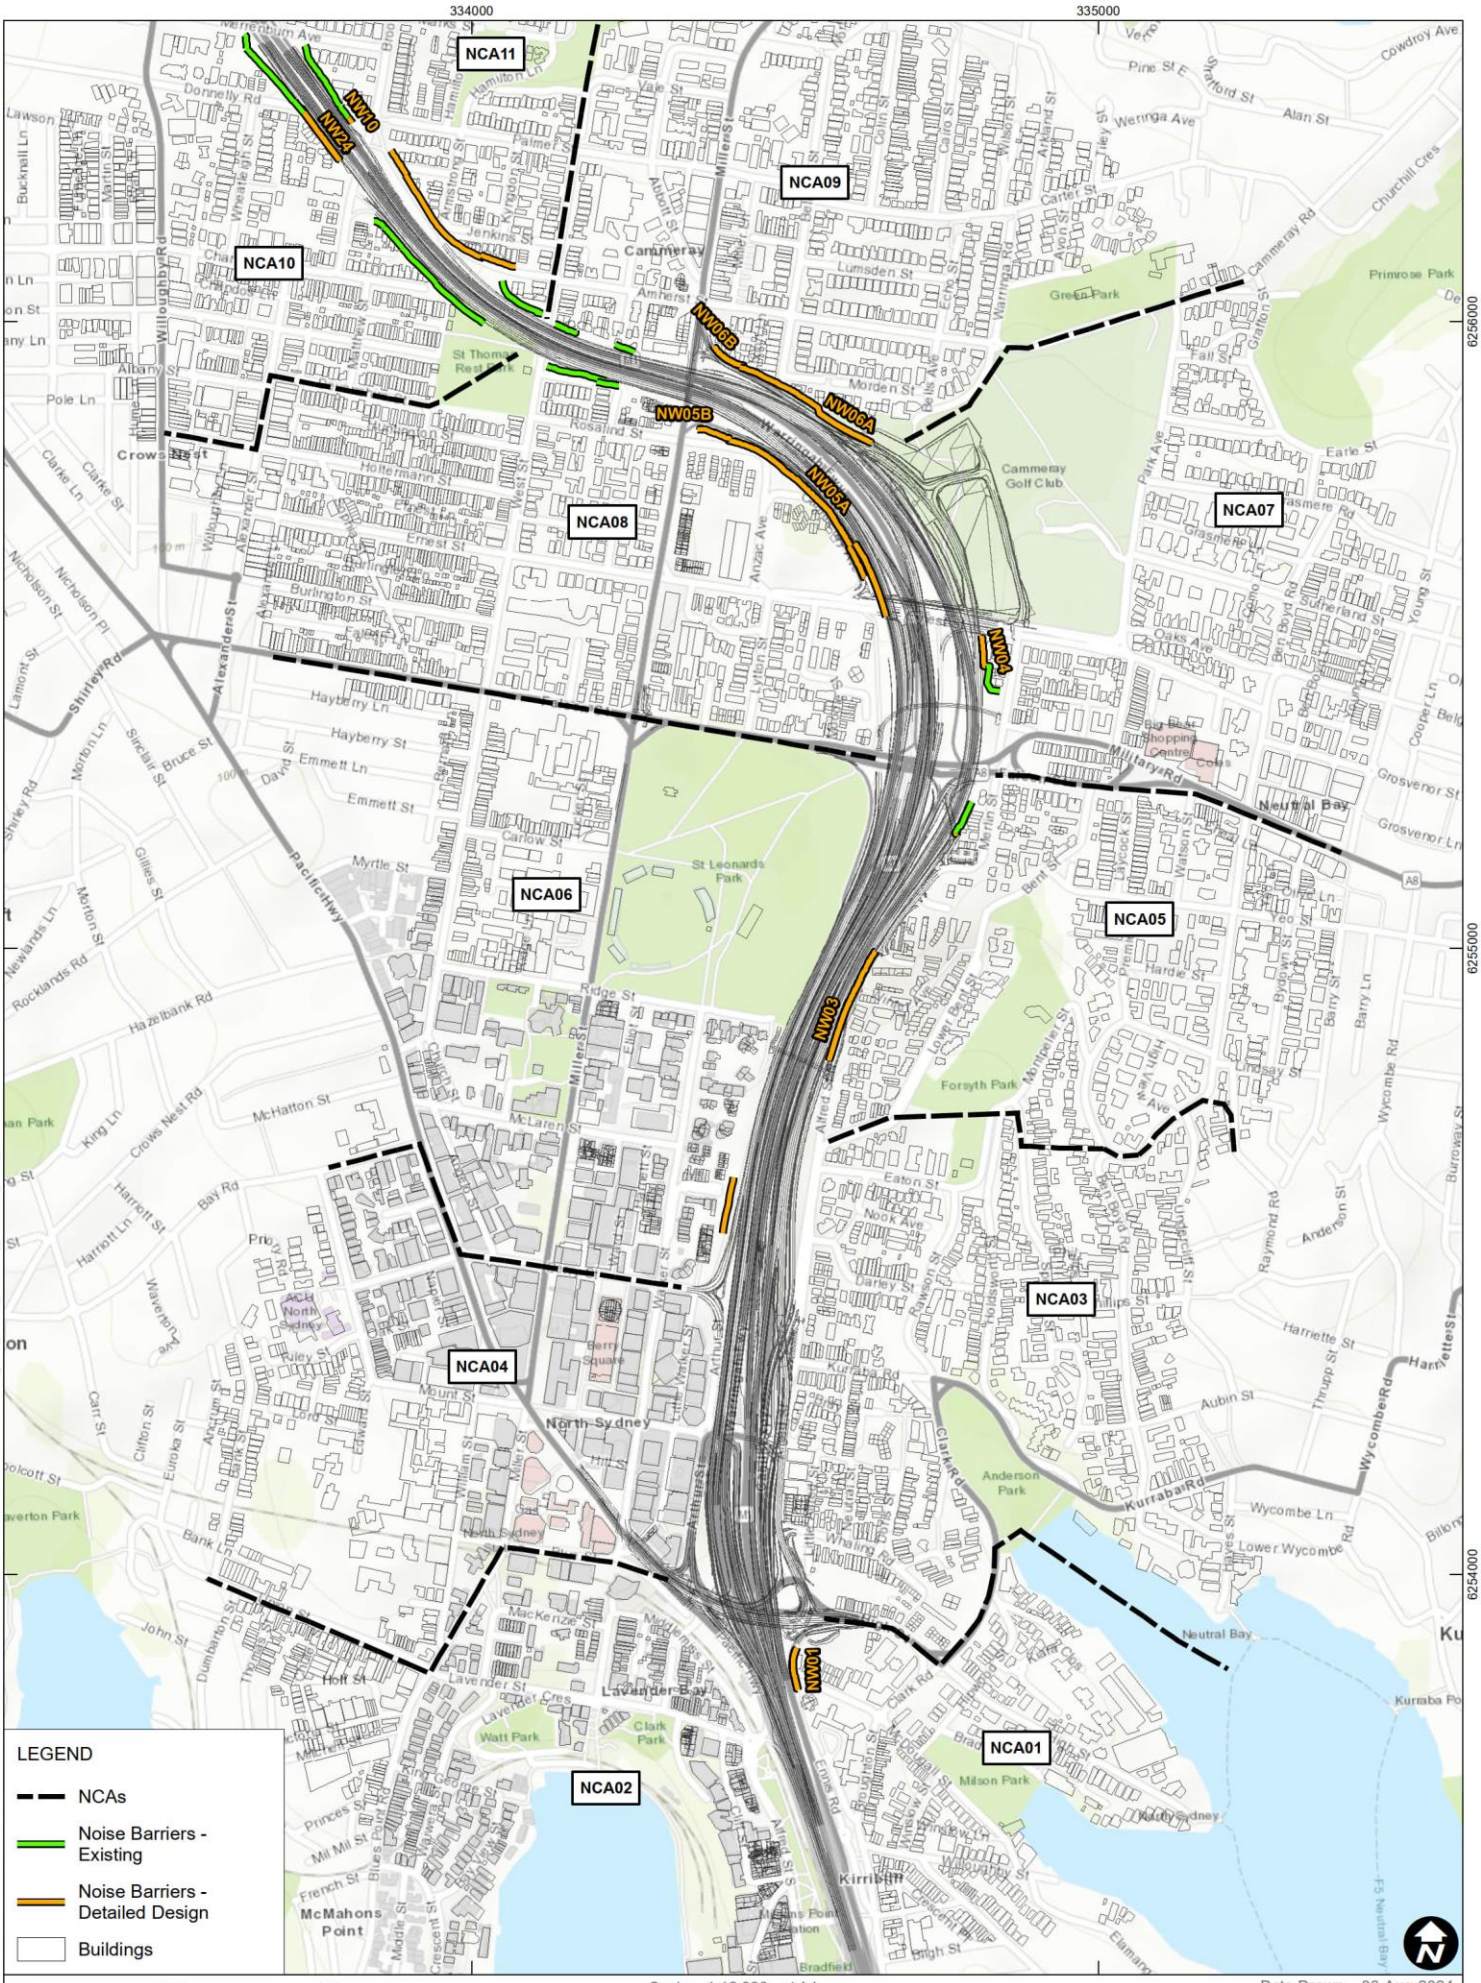

All noise barriers have been reviewed during detailed design. The details of the noise barriers which are considered feasible and reasonable to construct are provided in **Table 10** and the detailed design noise barrier alignments are shown in **Figure 14**.

The predicted operational road traffic noise levels after the use of noise barriers are shown in the Final Build scenarios in **Appendix B**.

Table 10 Detailed Design Noise Barriers

Reference		Type	Height		Approx. Length		Comments
EIS	Detailed Design		EIS	Detailed Design	EIS	Detailed Design	
WFNB_001	NW01	New	4.0 m	4.0 m	67 m	69 m	Detailed design noise barrier generally consistent with the EIS.
WFNB_002	-	New	5.0 m	5.0 m	92 m	92 m	This noise barrier is part of Western Harbour Tunnel scope. Design information for this noise barrier has been provided by TfNSW and included in the noise model.
WFNB_003	NW03	New	5.0 m	5.0 m	140 m	189 m	Detailed design noise barrier longer than EIS noise barrier by around 50 m at northern end, otherwise generally consistent with the EIS.
WFNB_004	NW04	Existing	Existing	3-6 – 4.0 m	115 m	118 m (existing + new)	The EIS replaced the entire existing noise barrier whereas the detailed design retains the southern part of the existing noise barrier (as it is not physically affected by the work). Noise barrier otherwise generally consistent with the EIS.
WFNB_005	NW05A/B	New	5.0 m	5.5 – 6.0 m	138 m	323 m	The EIS retained the southern section of the existing noise barrier whereas the detailed design replaces the entire existing noise barrier (as it is physically affected by the work). Height generally consistent with the EIS. Some sections are taller which is generally due to undulating ground conditions under localised sections of the noise barrier.
WFNB_006	NW06A/B	New	4.5 m	5.6 – 6.4 m	326 m	308 m	Detailed design noise barrier alignment refined due to the EIS noise barrier alignment clashing with the Brook Street shared path connection. This has resulted in the southern end being around 25 m shorter. Further investigation of the shorter length of NW06A is provided in **Section 7.2.1**. Height generally consistent with the EIS. Some sections are taller which is generally due to undulating ground conditions under localised sections of the noise barrier.
WFNB_007	-	New	n/a	n/a	-	-	The EIS noted this noise barrier provides minimal noise benefit and is not feasible or reasonable to construct due to the insufficient structural capacity of the existing bridge that it would be attached to. Review of this noise barrier during detailed design resulted in the same outcome.
WFNB_008	-	New	4.5 m	~4.5m	295 m	310 m	This noise barrier was constructed as part of WFU Early Works (as per approval in Condition E91(b)).

Reference		Type	Height		Approx. Length		Comments
EIS	Detailed Design		EIS	Detailed Design	EIS	Detailed Design	
WFNB_009	NW10 (southern) NW14 (northern)	New / existing	Consist-ent with existing	4.2 m (NW10, southern end of noise barrier)	104 m	10 m (NW10, southern end of noise barrier)	The EIS recommended a new section of noise barrier (NW10) at the southern end of this existing noise barrier at the same height as existing. The northern end of the existing noise barrier, which is located at the top of a steep cutting, was recommended to be increased in height (NW14). The EIS noted that the final barrier design would consider all potential constraints during detailed design. Detailed design noise barrier NW10 is generally consistent with the EIS. The noise barrier alignment has been refined due to the EIS noise barrier conflicting with the active transport path. Further investigation of NW14 is provided in **Section 7.2.2**.
WFNB_010a	NW24	Existing	4.5 m	TBC	137 m	TBC	Noise barrier design currently on hold pending survey due to limited access. An indicative design for this noise barrier has been included in the noise model. The potential impacts adjacent to this noise barrier would be further investigated when the final design is available and included in an ONR amendment report.
WFNB_010b	-	Existing	n/a	n/a	-	-	The EIS noted that increases in height of this barrier provide minimal benefit and recommended the existing noise barrier be retained. Review of this noise barrier during detailed design resulted in the same outcome.
-	Falcon Street bus ramp	New	-	3 m	-	74 m	The new Falcon Street bus ramp has an acrylic headlight screen on the eastern side of ramp near to Alfred Street North/McIntosh Lane. This provides noise screening to receivers in this area and has been included in the noise model.

7.2.1 Further Investigation of Noise Barrier NW06A

NW06A is a new noise barrier on the north-eastern side of the motorway near to Morden Street in Cammeray. The EIS recommended a 326 m long noise barrier, however it was noted that the barrier design would be further investigated during detailed design, considering all potential constraints.

Constructability

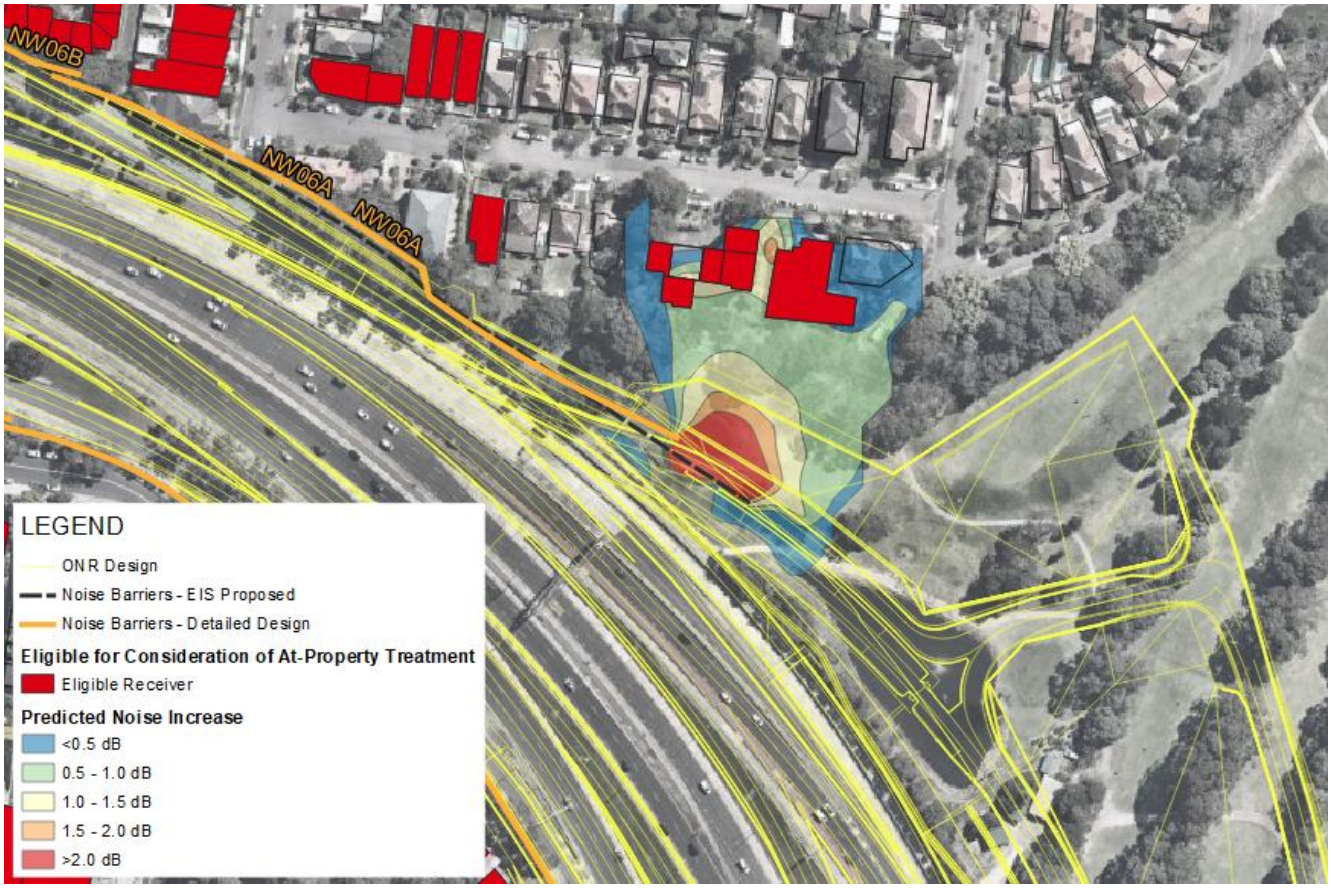

The southern end of NW06A was found to clash with the Brook Street shared path connection during the detailed design development. The southern end of NW06A has therefore been amended to remove this clash which results in the southern end being around 25 m shorter than recommended in the EIS, as shown in **Figure 15**.

Change to Acoustic Impacts

Further investigation of the acoustic impact of the revised southern end of NW06A has been completed. This compared noise level predictions with the EIS design of the noise barrier against predictions for the detailed design.

The results are shown in **Figure 15**. Receivers which are currently identified as eligible for consideration of at-property treatment are also shown (see **Section 7.3** for details of at-property treatments).

Figure 15 Investigation of NW06A including Difference Grid Noise Map Showing Noise Increase from EIS

The above shows:

- The shorter southern end of NW06A increases road noise levels when compared to the EIS, however, the increase is mostly limited to the area immediately behind the removed section of the noise barrier.
- The two residential receivers to the north of the removed section are predicted to be subject to increased noise levels, however, the increases are generally minor (ie around 1 dB at the most exposed facades).
- These receivers are already identified as eligible for consideration of at-property treatment. At-property treatments are currently being investigated and delivered by TfNSW as part of the WFU Noise Insulation Program.

Based on the above constructability issues and minor overall noise difference, the change to NW06A is considered reasonable.

7.2.2 Further Investigation of Noise Barrier NW14

NW14 is an existing noise barrier at the top of a rock cutting, as shown in **Figure 16**. The EIS recommended an increase in height of the existing noise barrier, however it was noted that the barrier design would be further investigated during detailed design, considering all potential constraints.

Figure 16 Investigation of NW14

Constructability

Further investigation of NW14 has identified several constructability issues, including:

- Noise barrier NW14 is a proposed modification of the existing Lane Cove Tunnel noise barrier, built in 2006. The existing noise barrier was originally built via access from 14 Merrenburn Avenue when the plot was empty. The property at 14 Merrenburn Avenue no longer allows construction access from the eastern side of the noise barrier.
- Construction methodologies for NW14 have been reviewed by the design team and noted the following:
  - Piling for a new noise barrier is not feasible due access being required from the high eastern side of the rock slope.
  - Temporary works to build a piling platform from the motorway side of the rock slope would have major design, programme and cost impacts, and would also need approval due to existing trees.
  - Modification of the existing noise barrier would require access from 14 Merrenburn Avenue to remove the top panel of the noise barrier and install steel frames and acrylic panels. Cranage would be required to lift items over the property, meaning the residents would need to be evacuated during crane operation. Additionally, modification of the northern end of the noise barrier would need a foundation to be placed including a permit to install a piling rig in the front yard of the property.

Acoustic Benefit

Further investigation of the acoustic benefit of NW14 has been completed. This compared noise level predictions with the concept design of the increased height noise barrier NW14 against predictions for the existing noise barrier.

The results are shown in **Figure 17** for facade points of receivers adjacent the noise barrier. Receivers which are currently identified as eligible for consideration of at-property treatment are also shown (see **Section 7.3** for details of at-property treatments).

Figure 17 Noise Increase Assuming Existing Noise Barrier is Retained

The above shows:

- NW14 generally provides a negligible benefit to the facades of most receivers behind the noise barrier, with most predicted to have less than a 0.5 dB benefit. Noise level changes of less than 2.0 dB are generally not considered noticeable.
- Retaining the existing noise barrier is predicted to increase noise levels by >2.0 dB at 14 Merrenburn Avenue, however this is only apparent at the west facades which face the motorway that are immediately adjacent NW14. Noise levels at all other facades are not predicted to be subject to a significant increase.
- All receivers in this area are already identified as eligible for consideration of at-property treatment, including the west facing facades of 14 Merrenburn Avenue. At-property treatments are currently being investigated and delivered by TfNSW as part of the WFU Noise Insulation Program.

Based on the above constructability issues and minimal overall noise benefit that NW14 provides, the construction of NW14 is not considered feasible or reasonable and the existing noise barrier has been retained in detailed design.

7.3 At-Property Mitigation – Architectural Treatment

Residual impacts which remain after the use of at-source and in-corridor mitigation are typically addressed using at-property mitigation.

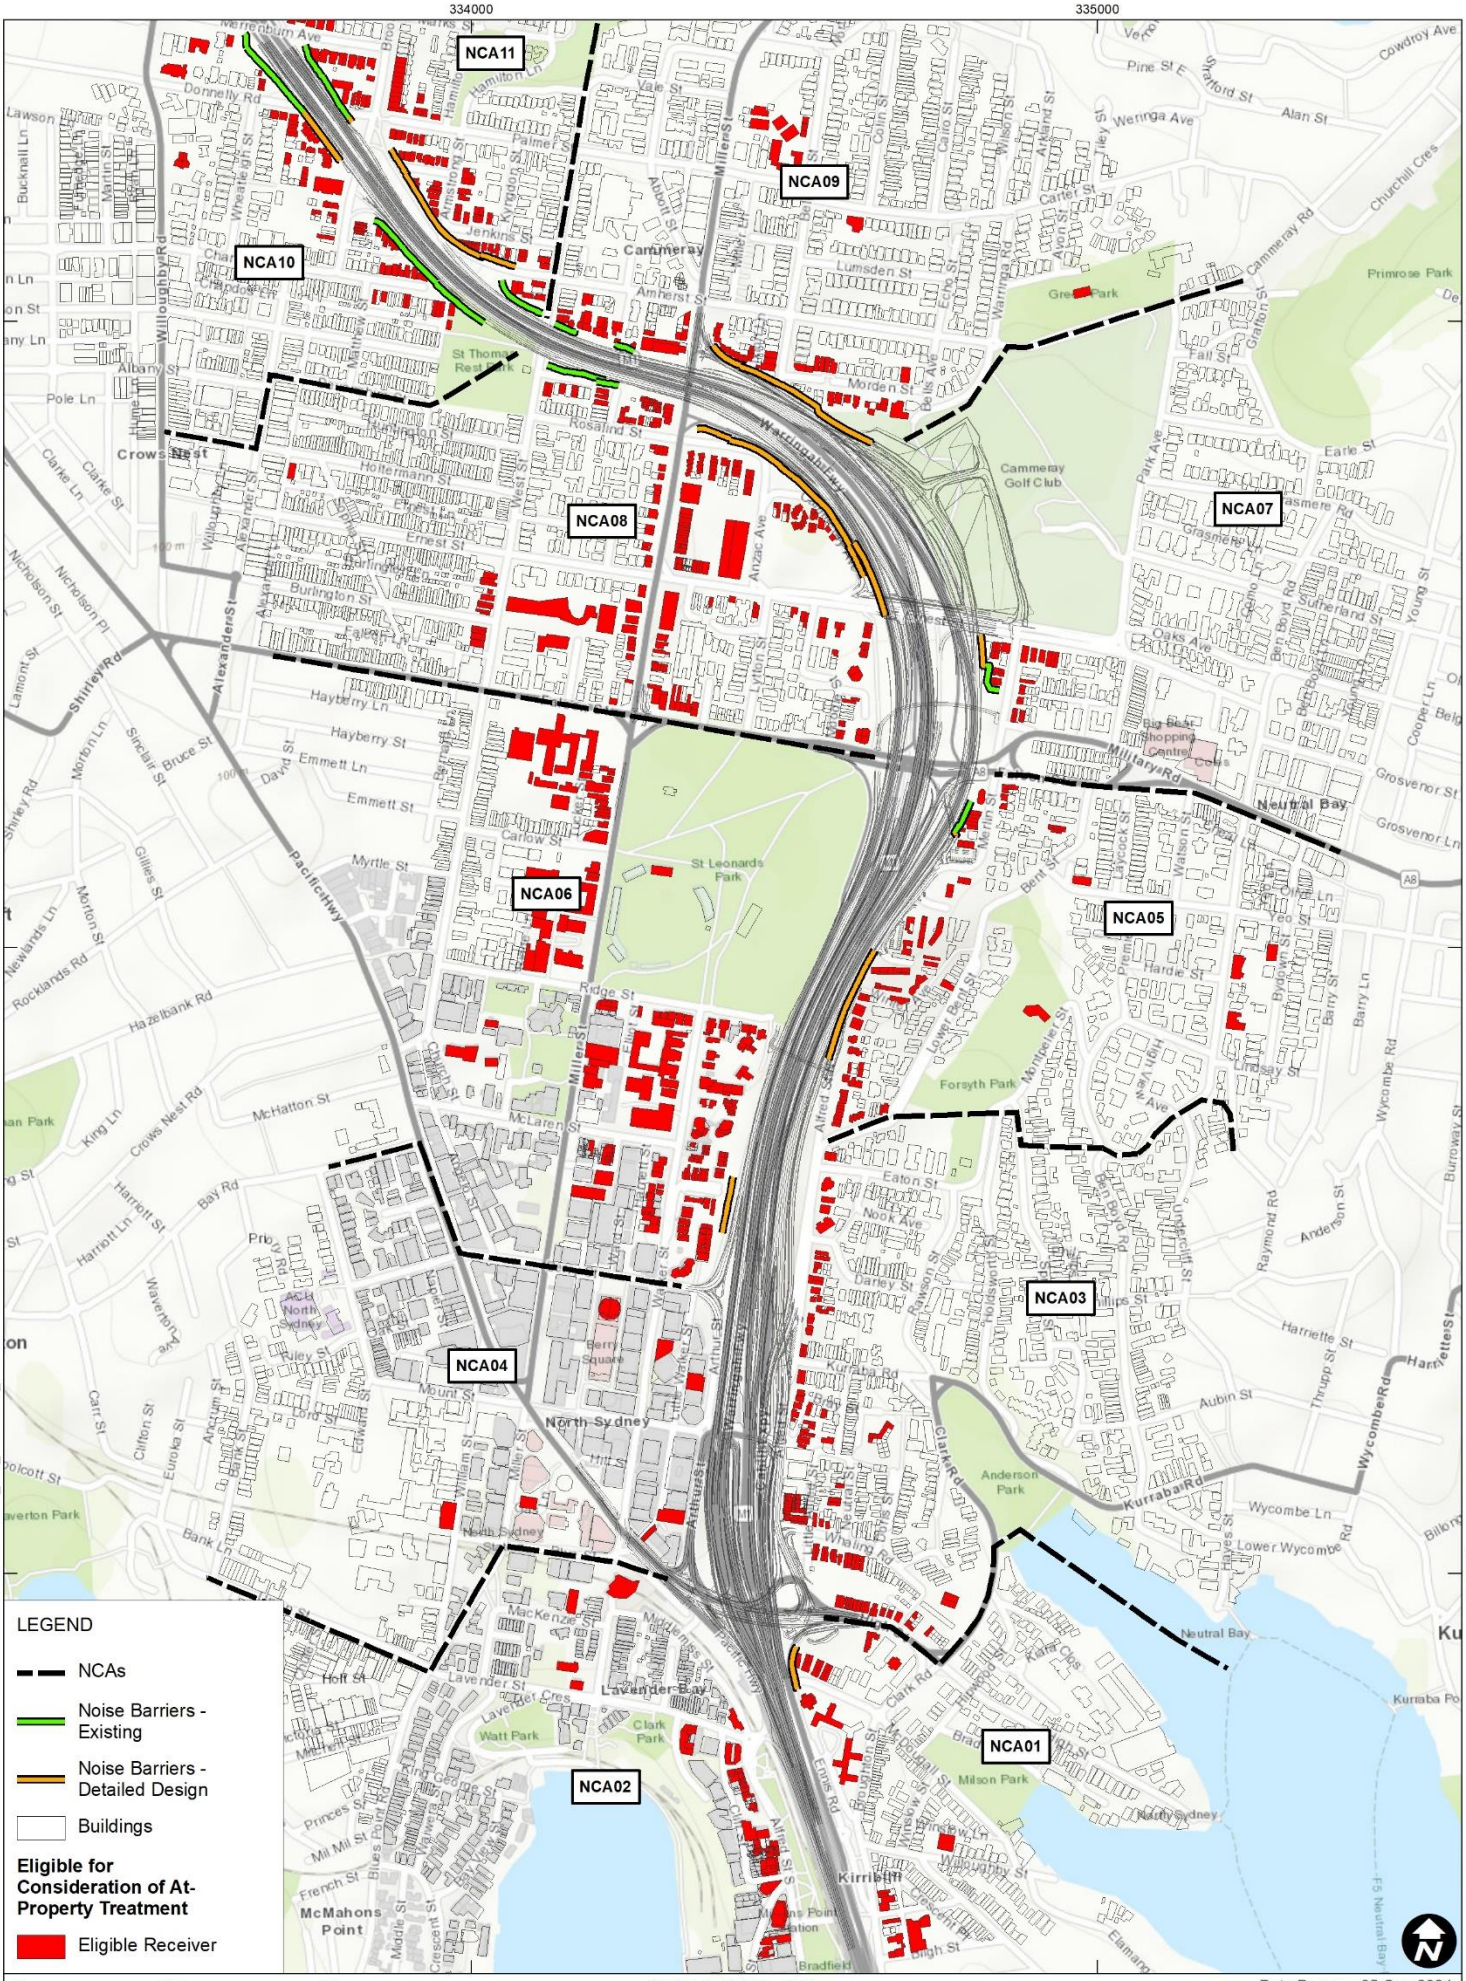

The receivers identified as being eligible for consideration of additional mitigation are summarised in **Table 11** and **Figure 18** for the Do Something (Interim) scenario, and in **Table 12** and **Figure 19** for the Do Something (Cumulative) scenario.

The detailed design assessment shows that:

- Do Something (Interim): 437 residential buildings and 96 'other sensitive' receiver buildings (533 buildings in total) are eligible for consideration of at-property treatment.
- Do Something (Cumulative): 388 residential buildings and 85 'other sensitive' receiver buildings (473 buildings in total) are eligible for consideration of at-property treatment.

At-property treatments for the project are being delivered by TfNSW as part of the NIP. Further details of the NIP are provided in **Section 5.2.3.1**.

It is noted that forecast traffic data is not available for certain roads that are distant from the project. Several 'other sensitive' receivers that are located far from the project have been identified as eligible for consideration of at-property treatment on the basis that the predicted road noise levels at these locations are dominated by the project.

Attended spot measurements were completed in a sample of locations where 'other sensitive' receivers are distant from the project but predicted to be eligible for consideration of at-property treatment. The measured noise levels in these locations were found to be dominated by nearby non-project related roads that are not included in the noise model (and other nearby sources of noise), with road noise from the Warringah Freeway generally not audible.

7.3.1 Comparison of ONR to EIS and NIP

The receivers identified as being eligible for consideration of at-property treatment during detailed design are compared to those identified in the EIS and in the first phase of the NIP in **Table 13**.

It is noted that receiver eligibility under the NIP has been updated at various detailed design stages based on the most recent ONR results (including the results from this report).

The number of receivers identified as eligible for consideration of at-property treatment has generally increased in the ONR assessment. The key reasons for changes in predicted noise levels in the ONR assessment include:

- Road noise levels increasing due to the change from the crumb rubber pavement in the EIS (which has a -2 dB surface correction) to an SMA pavement in detailed design (which has a 0 dB surface correction)
- The ONR noise model using a higher resolution ground model, which includes current 3D survey for the road corridor, cuttings and embankments, bridges, existing noise barriers, etc.
- Sensitive receiver buildings being modelled based on current LIDAR data and aerial photography, with building attributes reviewed for accuracy during various NIP and ONR related site inspections.
- A higher spatial resolution of noise predictions, which included using several facade assessment points on sensitive receiver facades (as opposed to a single point in typical modelling), together with modelling individual units in multi-storey apartment buildings near to the project separately.

Table 13 Buildings Eligible for Consideration of At-Property Treatment – ONR (Do Something Cumulative) vs EIS and NIP

NCA	Buildings Eligible for Consideration of At-Property Treatment			Comments (ONR in comparison to EIS)
	EIS	NIP	ONR	
NCA01	23	14	20	Eligible receivers are generally comparable.
NCA02	18	13	18	Eligible receivers are generally comparable.
NCA03	45	81	69	Additional residential receivers identified as eligible for consideration of at-property treatment in ONR to the east of Warringah Freeway near Alfred Street North in North Sydney, due to a mixture of noise levels being above the cumulative limit criteria and/or being acute. The increased ONR impacts likely due to the use of an SMA road surface and general refinement of the ONR noise model.
NCA04	3	1	7	Additional 'other sensitive' receivers identified in ONR near to Pacific Highway in North Sydney. Receivers not identified as sensitive in EIS.
NCA05	43	43	39	Less residential receivers identified in ONR generally due to the project footprint being reduced along Military Road in Neutral Bay compared to the EIS.
NCA06	65	60	105	Additional residential and 'other sensitive' receivers identified in ONR in North Sydney, due to a mixture of noise levels being above the cumulative limit criteria and/or being acute. The increased ONR impacts likely due to the use of an SMA road surface and general refinement of the ONR noise model.
NCA07	22	17	11	Less residential receivers identified in ONR generally due to the project footprint being reduced along Military Road in Neutral Bay compared to the EIS.
NCA08	63	68	64	Less residential receivers identified in ONR generally due to the project footprint being reduced along Military Road in Neutral Bay compared to the EIS. Additional residential receivers identified along Miller Street in Cammeray due to noise levels being predicted to increase by more than 2 dB (resulting from redistributed traffic volume increases on this route).
NCA09	17	24	34	Additional residential receivers identified in ONR to the north of Warringah Freeway, near Morden Street in Cammeray, due to a mixture of noise levels being above the cumulative limit criteria and/or being acute. A small number are also predicted to have noise levels that increase by more than 2 dB. The increased ONR impacts likely due to the use of an SMA road surface and general refinement of the ONR noise model.
NCA10	35	25	42	Eligible receivers are generally comparable.
NCA11	35	38	64	Additional residential receivers identified in ONR to the north of Warringah Freeway, near Palmer Street and Jenkins Street in Cammeray, due to a mixture of noise levels being above the cumulative limit criteria and/or being acute. The increased ONR impacts likely due to the use of an SMA road surface and general refinement of the ONR noise model.
TOTAL	**369**	**384**	**473**	-

Note: Certain buildings are multi-storey apartment blocks. As such, the number of affected units is higher than the number of affected buildings.

7.4 Implementation of Operational Noise Mitigation Measures not affected by the Works

Minster's Condition of Approval E90 requires operational noise mitigation measures that are not physically affected by work to be implemented within six months of submitting the ONR, unless otherwise agreed by the Planning Secretary.

- **At-Source Mitigation** – low noise pavements have not been adopted for this project (see **Section 7.1**). As such there is no requirement to implement at-source mitigation within six months of submitting the ONR.
- **In-Corridor Mitigation** – the majority of existing noise barriers in the study area are being retained (see **Section 7.2**). Where existing noise barriers require modification due to the works physically affecting them, or where construction of new noise barriers is required, access to carry out the work will only be available after the widening work commences under the relevant traffic switch. Early implementation of noise barrier construction is therefore not possible due to traffic staging access constraints and space limitations within the road corridor. Additionally, the new and modified existing noise barriers are physically affected by the work meaning Minster's Condition of Approval E90 does not apply.
- **At-Property Mitigation** – TfNSW has developed the Noise Insulation Program (NIP) to deliver at-property noise treatment to mitigate the impact of operational and construction noise from the project at eligible properties. TfNSW took this approach to allow at-property noise treatments to be implemented as early as possible (see **Section 5.2.3.1** for details of the NIP and **Section 7.3** for details of eligible properties).

8 Additional Requirements from MCoA

8.1 Review of EIS Mitigation Measures

Minister's Condition of Approval E89(d) requires the ONR to review the suitability of the operational noise mitigation measures identified in the EIS and, where necessary, investigate and identify additional mitigation measures. The suitability of the proposed EIS operational noise mitigation measures are reviewed in **Table 14**.

Table 14 Review of Suitability of EIS Noise Mitigation Measures

No.	Environmental Mitigation or Management Measure	Suitability of Proposed Measure
ONV1	The operational noise performance of the project will be reviewed during detailed design and operational noise mitigation (low noise pavement, noise barrier, at-property treatment or a combination of treatments) will be confirmed in accordance with relevant policies and guidelines.	This ONR assesses the operational noise impacts and mitigation requirements from the detailed design of the project. The use of low noise pavements, noise barriers and at-property treatments are discussed in **Section 7**.
ONV2	Within 12 months of the commencement of the operation of the project, actual operational noise performance will be compared to predicted operational noise performance (as reviewed during detailed design) to analyse the effectiveness of the operational road traffic noise mitigation measures. Additional reasonable and feasible mitigation will be considered where any additional receivers are identified as qualifying for consideration of noise mitigation under the Noise Mitigation Guideline (Roads and Maritime, 2015).	Post-construction measurements would be completed within 12 months of commencement of operation, as required by Minister's Condition of Approval E92. The outcomes of this would be documented in an Operational Noise Compliance Report (ONCR), as required by Minister's Condition of Approval E93. The ONCR is discussed further in **Section 8.5**.
ONV3	Operational fixed facilities will be designed to meet project specific noise criteria derived in accordance with the Noise Policy for Industry (EPA, 2017).	The WFU project relates only to surface works around Warringah Freeway and does not include any fixed facilities.

Additional feasible and reasonable noise mitigation measures in the form of noise barriers and/or at-property treatments have been identified for the project and are discussed in **Section 7.2** and **7.3**, respectively.

8.2 Consultation

8.2.1 ONR Consultation

Minister's Condition of Approval E89 requires the ONR to be prepared in consultation with the Planning Secretary, relevant council(s), and the EPA.

The final draft version of this ONR was provided for comment to North Sydney Council, Willoughby City Council, NSW Environmental Protection Agency and NSW Department of Planning and Environmental in August 2023.

8.2.2 Consultation Strategy

Minister's Condition of Approval E89(e) requires the ONR to include a consultation strategy to seek feedback from directly affected landowners on the noise and vibration mitigation measures.

The various aspects of the strategy are detailed below:

- Noise barrier consultation – directly affected landowners will be consulted through the Place Design and Landscape Plan (PDLP) community consultation process, consultation with affected landowners will include:
  - Letterbox drop notifications outlining the PDLP community consultation process and providing links to online consultation material including information on noise barrier locations along the project alignment
  - Information will be provided on how and where to view a hard copy if preferred
  - WFU project web portal page
  - Doorknocking of directly affected landowners by WFU community relations team
  - Two PDLP in person information sessions will be held
  - Two online PDLP webinars will be held
  - Emails will be issued to the WFU subscribed stakeholder distribution list, 3,000 subscribed email addresses.
- Falcon Street southbound bus ramp glare screen consultation. As well as limiting headlight glare from buses using the ramp, the screen has an additional noise mitigation benefit for nearby homes.
- Transport for NSW Noise Insulation Program (NIP) – the NIP involves the proactive implementation of noise treatment at eligible properties. The TfNSW NIP outlines the process and criteria for treating properties for both operational and construction noise and applies the following engagement process for affected stakeholders:
  - Letter to introduce the project and provide overview of the NIP
  - Follow up letters and doorknock to remind stakeholders in the case of no response
  - Building inspection / noise treatment assessment
  - Issue of treatment package offer to eligible properties
  - Installation of treatment
  - Post-installation survey to seek feedback from stakeholders on the above process and effectiveness of treatment.

  Section 8 of the NIP provides further details regarding how communication and engagement with property owners occurs during delivery of noise treatments for the project.

8.3 Complaints Management

Minister's Condition of Approval E89(f) requires a complaints management system to be developed for the project.

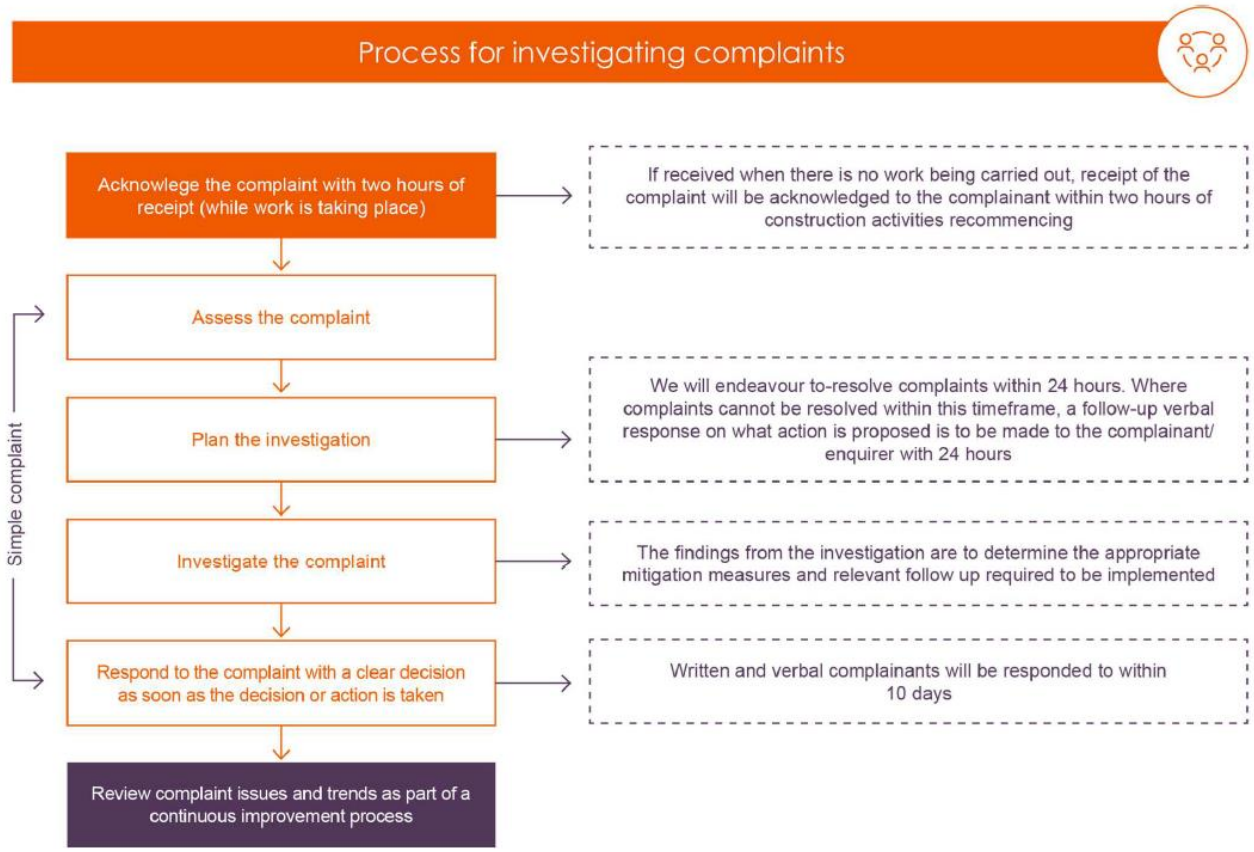

The complaint management system is outlined in the project's approved Community Communication Strategy (CCS). The purpose of this system is to specify the process for receiving, addressing, resolving and recording complaints as well as outlining the process required in the escalation of a complaint to an independent mediator.

The project's complaint management system is in place for the duration of the project and up to 12 months following construction completion in accordance with Minister's Condition of Approval B7. The project will respond and investigate complaints in accordance with the SWTC and Minister's Conditions of Approval.

Operational noise and vibration complaints can include complaints resulting from uneven road surfaces, increased impacts from road alignment moving closer to properties, location or design of noise barriers. In addition to the process detailed in the CCS and the general project contact details, NIP-specific contact details are also provided during NIP engagement for any noise and vibration specific complaints.

An overview of the process is shown in **Figure 20**.

Figure 20 Complaints Management Process Overview

Complaints Management – NIP

Section 9 of the NIP contains TfNSW's complaints management framework for the project, which details how complaints, feedback and enquires would be received, managed, resolved, and escalated, if required.

The NIP specifies that the following communication tools will be used for receiving complaints, feedback and enquires from the community:

- **Community information line** – the 1800 telephone number will enable the local community to have a means to access the project team.
- **Email address** – the email address will allow the local community to have access to the project team.
- **Customer feedback post box** – the postal address will allow the local community to access the project team in another format.
- **Face-to-face** – stakeholders may approach the project team to express their dissatisfaction. All interactions are escalated to the NIP Community and Stakeholder Engagement team.
- **Website** – in addition to being a tool for the dissemination of information, the website will also have a feedback mechanism, which will allow the local community to write to the project team.
- **Complaints register** – Consultation Manager, online complaints register, will be used to track the recording, investigation and handling of all community enquiries and matters raised. All enquiries and complaints will be recorded in Consultation Manager.

8.4 Independent Verification of ONR

Minister's Condition of Approval E89 requires that the ONR be verified by an independent acoustic expert.

This report has been independently reviewed and verified by Resonate Consultants in July/August 2023, and in September 2024.

8.5 Post-construction Compliance Monitoring

Minister's Condition of Approval E92 and E93 require post-construction operational noise validation measurements to be undertaken and production of an Operational Noise Compliance Report (ONCR) that documents the findings of the post-construction monitoring. The post-construction compliance assessment is required to be completed within 12 months of commencement of operation of the CSSI and would compare actual noise performance of the project against the noise performance predicted in the review of noise mitigation measures required by Minister's Condition of Approval E89 (as detailed in **Section 7** of this ONR).

Noise monitoring would be completed at representative locations along the alignment at receivers which are likely most affected by the project. A minimum of seven days of data would be captured and concurrent traffic counting would be completed to allow noise model validation.

The ONCR would be prepared in accordance with the TfNSW *Road Model Validation Guideline* and meet all requirements of Minister's Condition of Approval E92 and E93.

Where the post-construction noise levels are found to be significantly higher than the detailed design predicted noise level, mitigation would be re-evaluated for impacted receivers.

Appendix A

Acoustic Terminology

1. Sound Level or Noise Level

The terms 'sound' and 'noise' are almost interchangeable, except that 'noise' often refers to unwanted sound.

Sound (or noise) consists of minute fluctuations in atmospheric pressure. The human ear responds to changes in sound pressure over a very wide range with the loudest sound pressure to which the human ear can respond being ten million times greater than the softest. The decibel (abbreviated as dB) scale reduces this ratio to a more manageable size by the use of logarithms.

The symbols SPL, L or LP are commonly used to represent Sound Pressure Level. The symbol LA represents A-weighted Sound Pressure Level. The standard reference unit for Sound Pressure Levels expressed in decibels is 2 x 10^{-5} Pa.

2. 'A' Weighted Sound Pressure Level

The overall level of a sound is usually expressed in terms of dBA, which is measured using a sound level meter with an 'A-weighting' filter. This is an electronic filter having a frequency response corresponding approximately to that of human hearing.

People's hearing is most sensitive to sounds at mid frequencies (500 Hz to 4,000 Hz), and less sensitive at lower and higher frequencies. Different sources having the same dBA level generally sound about equally loud.

A change of 1 dB or 2 dB in the level of a sound is difficult for most people to detect, whilst a 3 dB to 5 dB change corresponds to a small but noticeable change in loudness. A 10 dB change corresponds to an approximate doubling or halving in loudness. The table below lists examples of typical noise levels.

Sound Pressure Level (dBA)	Typical Source	Subjective Evaluation
130	Threshold of pain	Intolerable
120	Heavy rock concert	Extremely noisy
110	Grinding on steel	
100	Loud car horn at 3 m	Very noisy
90	Construction site with pneumatic hammering	
80	Kerbside of busy street	Loud
70	Loud radio or television	
60	Department store	Moderate to quiet
50	General Office	
40	Inside private office	Quiet to very quiet
30	Inside bedroom	
20	Recording studio	Almost silent

Other weightings (eg B, C and D) are less commonly used than A-weighting. Sound Levels measured without any weighting are referred to as 'linear', and the units are expressed as dB(lin) or dB.

3. Sound Power Level

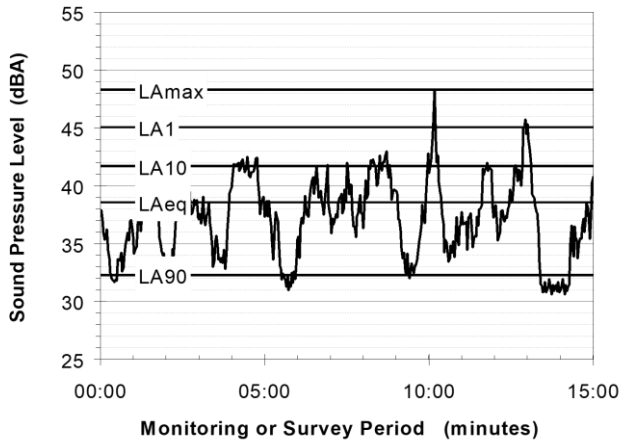

The Sound Power of a source is the rate at which it emits acoustic energy. As with Sound Pressure Levels, Sound Power Levels are expressed in decibel units (dB or dBA), but may be identified by the symbols SWL or LW, or by the reference unit 10^{-12} W.

The relationship between Sound Power and Sound Pressure is similar to the effect of an electric radiator, which is characterised by a power rating but has an effect on the surrounding environment that can be measured in terms of a different parameter, temperature.

4. Statistical Noise Levels

Sounds that vary in level over time, such as road traffic noise and most community noise, are commonly described in terms of the statistical exceedance levels LAN, where LAN is the A-weighted sound pressure level exceeded for N% of a given measurement period. For example, the LA1 is the noise level exceeded for 1% of the time, LA10 the noise exceeded for 10% of the time, and so on.

The following figure presents a hypothetical 15 minute noise survey, illustrating various common statistical indices of interest.

Of particular relevance, are:

LA1 The noise level exceeded for 1% of the 15 minute interval.

LA10 The noise level exceeded for 10% of the 15 minute interval. This is commonly referred to as the average maximum noise level.

LA90 The noise level exceeded for 90% of the sample period. This noise level is described as the average minimum background sound level (in the absence of the source under consideration), or simply the background level.

LAeq The A-weighted equivalent noise level (basically, the average noise level). It is defined as the steady sound level that contains the same amount of acoustical energy as the corresponding time-varying sound.

5. Frequency Analysis

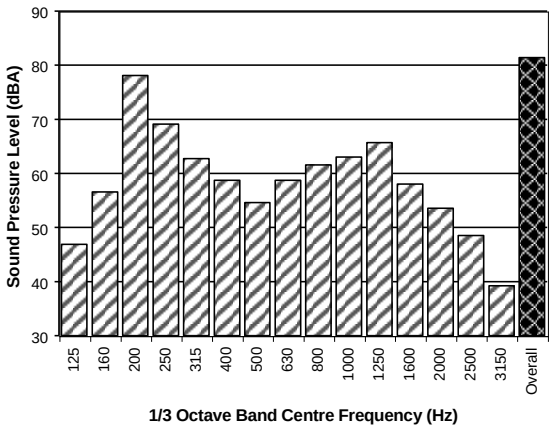

Frequency analysis is the process used to examine the tones (or frequency components) which make up the overall noise or vibration signal.

The units for frequency are Hertz (Hz), which represent the number of cycles per second.

Frequency analysis can be in:

- Octave bands (where the centre frequency and width of each band is double the previous band)
- 1/3 octave bands (three bands in each octave band)
- Narrow band (where the spectrum is divided into 400 or more bands of equal width)

The following figure shows a 1/3 octave band frequency analysis where the noise is dominated by the 200 Hz band. Note that the indicated level of each individual band is less than the overall level, which is the logarithmic sum of the bands.

6. Annoying Noise (Special Audible Characteristics)

A louder noise will generally be more annoying to nearby receivers than a quieter one. However, noise is often also found to be more annoying and result in larger impacts where the following characteristics are apparent:

- **Tonality** - tonal noise contains one or more prominent tones (ie differences in distinct frequency components between adjoining octave or 1/3 octave bands), and is normally regarded as more annoying than 'broad band' noise.
- **Impulsiveness** - an impulsive noise is characterised by one or more short sharp peaks in the time domain, such as occurs during hammering.
- **Intermittency** - intermittent noise varies in level with the change in level being clearly audible. An example would include mechanical plant cycling on and off.
- **Low Frequency Noise** - low frequency noise contains significant energy in the lower frequency bands, which are typically taken to be in the 10 to 160 Hz region.

7. Vibration

Vibration may be defined as cyclic or transient motion. This motion can be measured in terms of its displacement, velocity or acceleration. Most assessments of human response to vibration or the risk of damage to buildings use measurements of vibration velocity. These may be expressed in terms of 'peak' velocity or 'rms' velocity.

The former is the maximum instantaneous velocity, without any averaging, and is sometimes referred to as 'peak particle velocity', or PPV. The latter incorporates 'root mean squared' averaging over some defined time period.

Vibration measurements may be carried out in a single axis or alternatively as triaxial measurements (ie vertical, longitudinal and transverse).

The common units for velocity are millimetres per second (mm/s). As with noise, decibel units can also be used, in which case the reference level should always be stated. A vibration level V, expressed in mm/s can be converted to decibels by the formula 20 log (V/Vo), where Vo is the reference level (10^{-9} m/s). Care is required in this regard, as other reference levels may be used.

8. Human Perception of Vibration

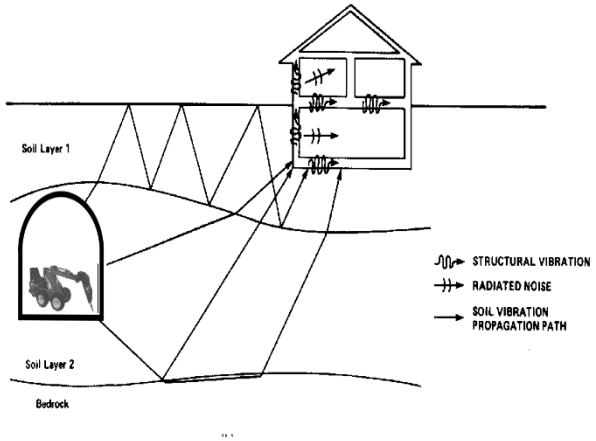

People are able to 'feel' vibration at levels lower than those required to cause even superficial damage to the most susceptible classes of building (even though they may not be disturbed by the motion). An individual's perception of motion or response to vibration depends very strongly on previous experience and expectations, and on other connotations associated with the perceived source of the vibration. For example, the vibration that a person responds to as 'normal' in a car, bus or train is considerably higher than what is perceived as 'normal' in a shop, office or dwelling.

9. Ground-borne Noise, Structure-borne Noise and Regenerated Noise

Noise that propagates through a structure as vibration and is radiated by vibrating wall and floor surfaces is termed 'structure-borne noise', 'ground-borne noise' or 'regenerated noise'. This noise originates as vibration and propagates between the source and receiver through the ground and/or building structural elements, rather than through the air.

Typical sources of ground-borne or structure-borne noise include tunnelling works, underground railways, excavation plant (eg rockbreakers), and building services plant (eg fans, compressors and generators).

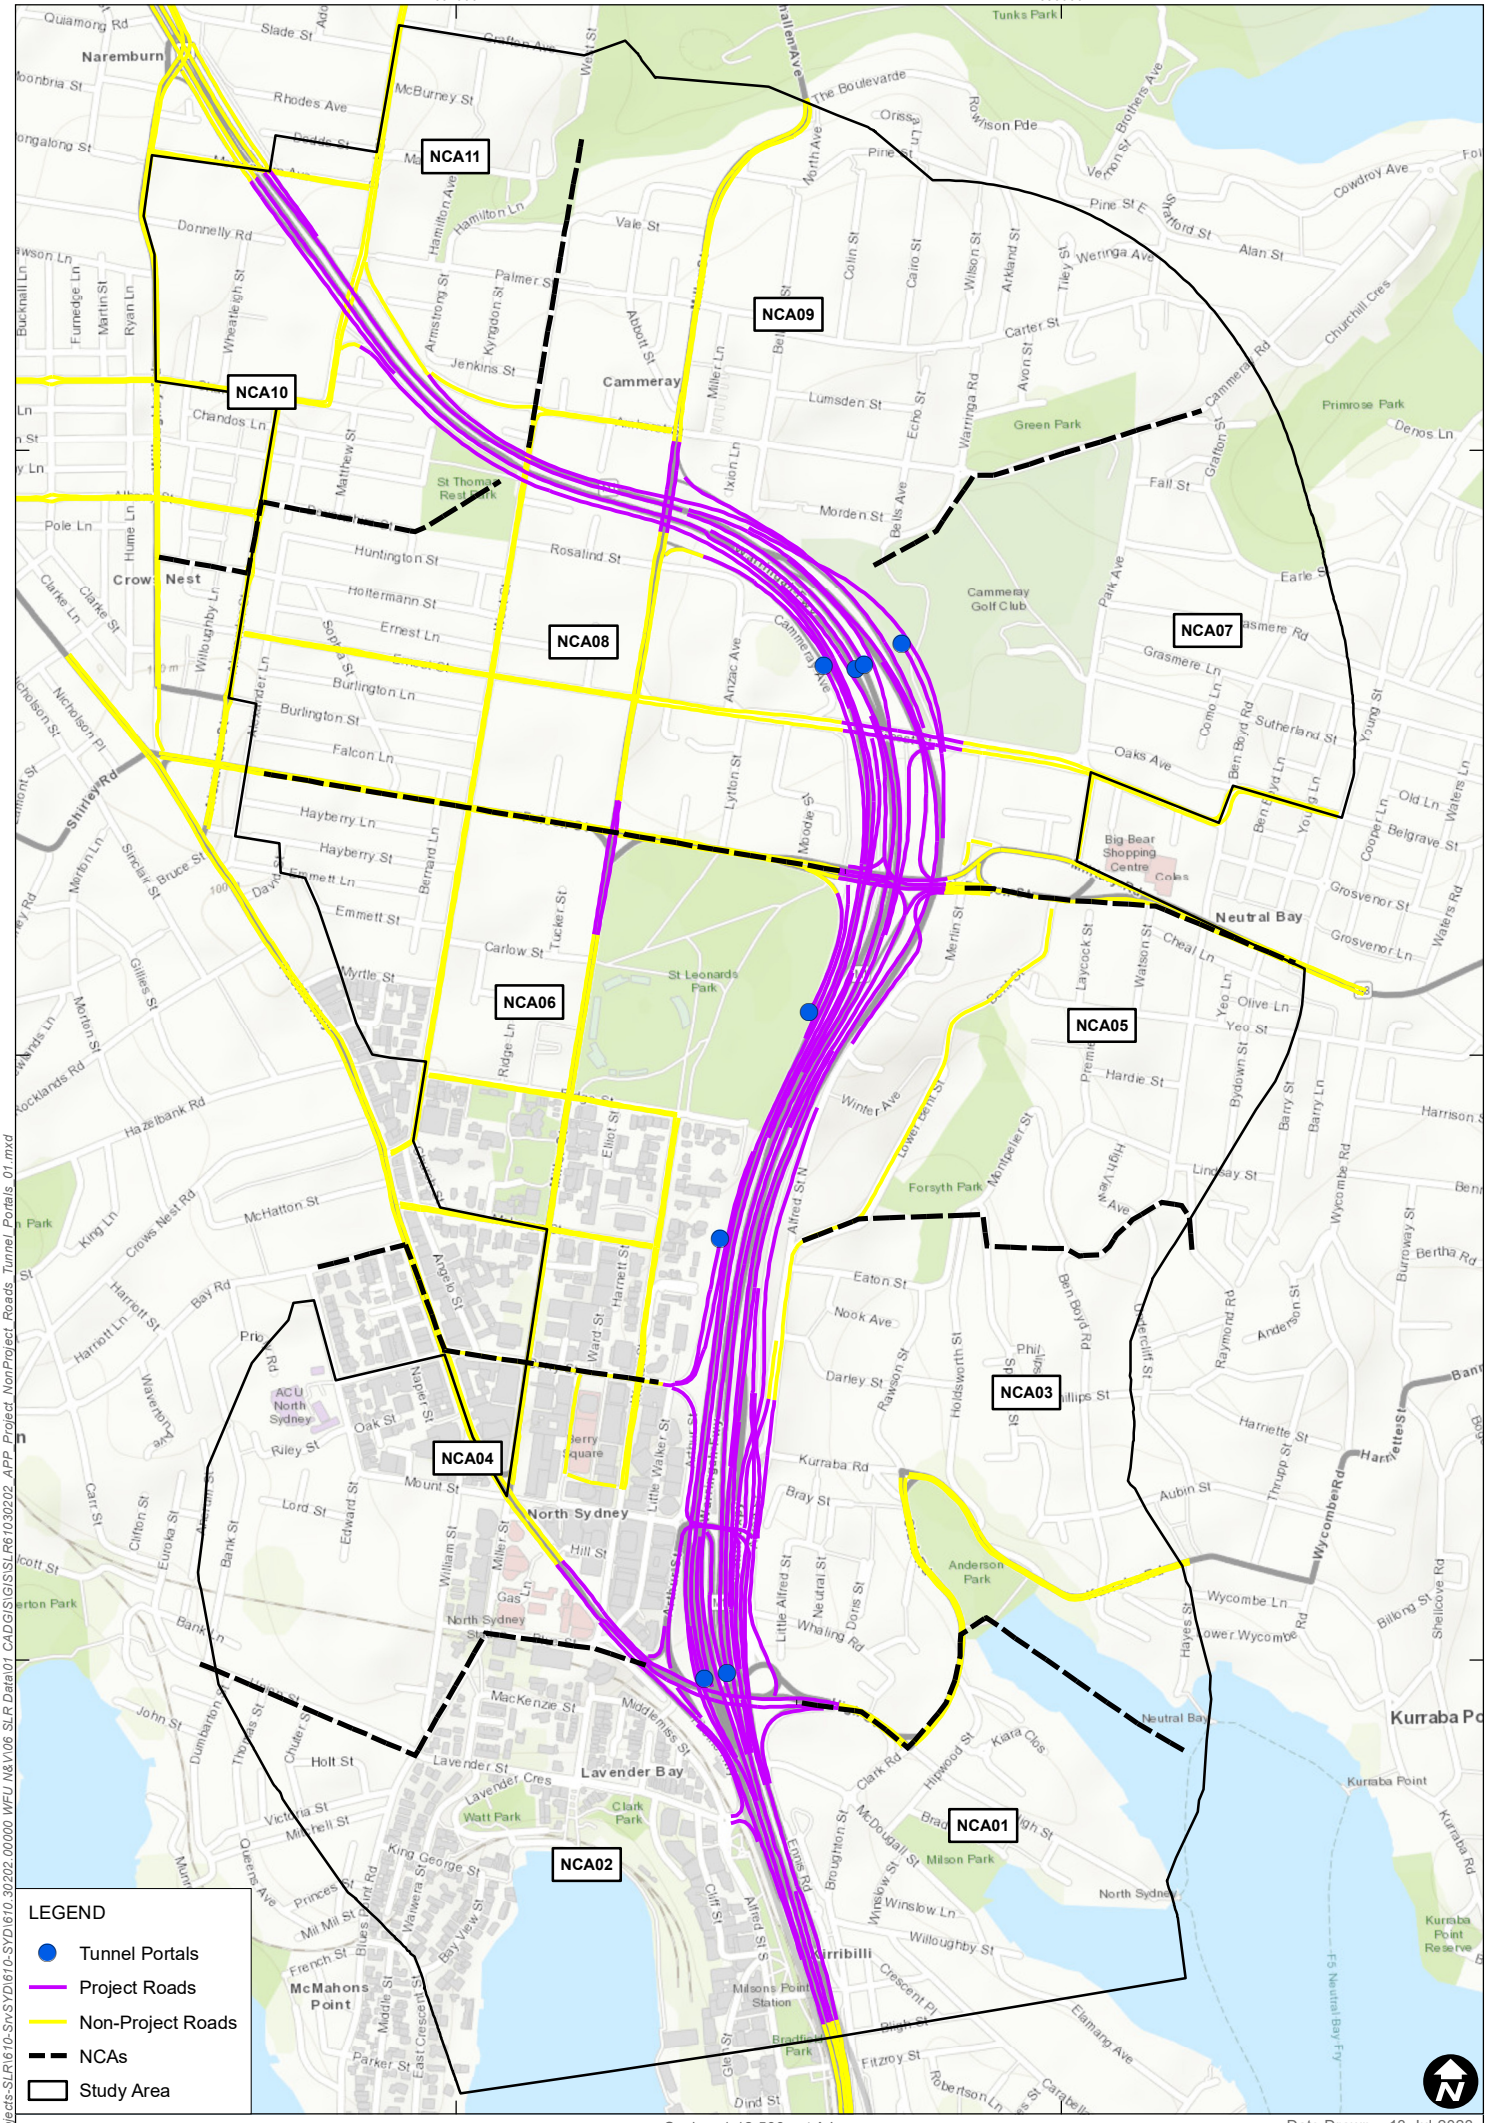

The following figure presents an example of the various paths by which vibration and ground-borne noise may be transmitted between a source and receiver for construction activities occurring within a tunnel.

The term 'regenerated noise' is also used in other instances where energy is converted to noise away from the primary source. One example would be a fan blowing air through a discharge grill. The fan is the energy source and primary noise source. Additional noise may be created by the aerodynamic effect of the discharge grill in the airstream. This secondary noise is referred to as regenerated noise.

Note 1: The predicted noise level results are based on the triggered facade with the highest level per floor. If no facades are triggered, then the highest noise level of all facades is presented for each floor. The Final Build scenario includes the noise benefit of all feasible and reasonable at-source and in-corridor noise mitigation measures.
Note 2: The >2 dB increase trigger is presented for the facade with the greatest increase per floor and may not be the same as the facade with the highest noise levels.
Note 3: The cumulative limit trigger requires predicted noise levels to be 5 dB or more above the RNCG criteria and have a contribution of 2.0 dB or greater from project roads. If a receiver has noise levels 5 dB or more above the RNCG criteria but does not trigger the cumulative limit, then the project road contribution is not significant (ie it is less than 2.0 dB).

Name	SLR ID	NCA	Flr	Easting	Northing	Receiver Type	Address	RNCG Criteria		Period (P=period, H=hourly)	Predicted Noise Level (dBA)[1]										> 2 dB(A) Increase[2]		Cumulative Limit[3]		Project Acute[4]		Eligible for Consideration of Additional Mitigation	Eligible for Consideration of At-property Treatment
											At Opening						Future Design												
											No Build		Build		Final Build		No Build		Build		Final Build								
								D	N		D	N	D	N	D	N	D	N	D	N	D	N	D	N	D	N	D	N		

Note 4: The acute trigger requires predicted noise levels from project roads to be ≥65 dBA during the daytime or ≥60 dBA during the night-time. If a receiver has noise levels above the acute level but does not trigger the acute criteria, the project road contribution is less than the criteria.
General Note: Address information is from third party data and should be verified before use.

Do Something (Cumulative)

Note 1: The predicted noise level results are based on the triggered facade with the highest level per floor. If no facades are triggered, then the highest noise level of all facades is presented for each floor. The Final Build scenario includes the noise benefit of all feasible and reasonable at-source and in-corridor noise mitigation measures.
Note 2: The >2 dB increase trigger is presented for the facade with the greatest increase per floor and may not be the same as the facade with the highest noise levels.
Note 3: The cumulative limit trigger requires predicted noise levels to be 5 dB or more above the RNCG criteria and have a contribution of 2.0 dB or greater from project roads. If a receiver has noise levels 5 dB or more above the RNCG criteria but does not trigger the cumulative limit, then the project road contribution is not significant (ie it is less than 2.0 dB).
Note 4: The acute trigger requires predicted noise levels from project roads to be ≥65 dBA during the daytime or ≥60 dBA during the night-time. If a receiver has noise levels above the acute level but does not trigger the acute criteria, the project road contribution is less than the criteria.
General Note: Address information is from third party data and should be verified before use.
