

Benefits

Capable of carrying
more than 3,000MW
of energy

Capable of delivering
enough clean energy
to power up to
1 million homes

Unlocking wind and
solar projects in
Western Victoria

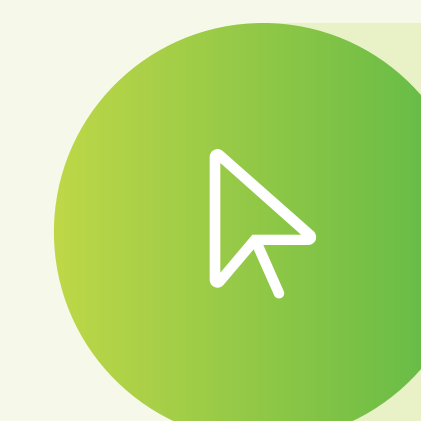

700 jobs
in construction

AusNet Services is actively supporting the transition to renewable energy, connecting both local and grid-scale renewable generation.

We are planning and delivering transmission network projects to reduce potential network constraints, maximising the volumes of renewable energy that can be generated across Victoria.

The Western Renewables Link will reduce congestion on the existing transmission network and unlock up to 900MW of renewable energy capacity.

The project provides a range of benefits for all Victorians including improved energy security and increased economic activity.

Learn more about the project benefits by visiting our [website](#).
